Department of Defense Fiscal Year (FY) 2019 Budget Estimates

February 2018

Navy

Justification Book Volume 1 of 1

Weapons Procurement, Navy

UNCLASSIFIED

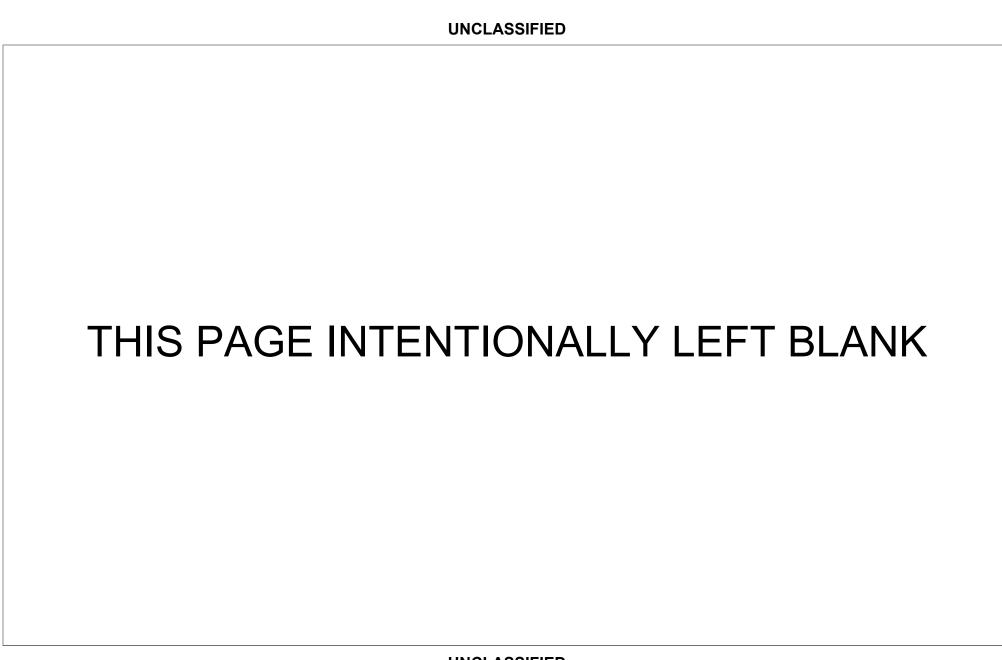

The estimated cost for this report for the Department of the Navy (DON) is \$38,812.

The estimated total cost for supporting the DON budget justification material is approximately \$1,643,653 for the 2018 fiscal year. This includes \$79,753 in supplies and \$1,563,900 in labor.

Exhibit MYP-1, Multiyear Procurement Criteria		Date: September 2018
Appropriation / Budget Activity: 1507 Weapons Procurement - Navy / Other Missiles (BA-02)	P-1 Item Nomenclature: Standard Missile (SM-6)	

1. Multiyear Procurement Description:

This multiyear procurement (MYP) provides for the procurement of up to 625 Standard Missile-6 (SM-6) Block I/IA guided missiles for fiscal year (FY) 2019 through FY 2023 program. Advance procurement for economic order quantities begin in FY 2019. This is a five year MYP contract.

This multiyear contract uses Economic Order Quantity Advance Procurement funding to provide the U.S. Government maximum savings in price. Advance Procurement funding will enable material and component suppliers and subcontractors with sufficient lead time to support the planned delivery schedule within the context of the multiyear funding, prices, and cancellation ceilings.

2. Benefit to the Government:

a. Substantial Savings:

Implementation of this proposed multiyear procurement (MYP) will yield substantial savings through the term of the contract. Specifically, savings for FY 2019 through FY 2023 attributable to this MYP strategy is estimated at \$331.4 million for a total of 13.7 percent.

b. Stability of Requirement:

The SM-6 program is one of the core Department of Navy missile programs. The Navy requirement for SM-6 is well documented in the Capability Production Document validated December 23, 2008 by the Joint Requirements Oversight Council. The Navy and Resource and Requirements Review Board (R3B) of March 13, 2013 established a requirement for 1800 SM-6 missiles. SM-6 leverages the legacy STANDARD Missile airframe and propulsion elements, while incorporating the advanced signal processing and guidance control capabilities of Advanced Medium-Range Air-to-Air Missile (AMRAAM). SM-6 provides air defense against fixed-wing and rotary-wing aircraft, unmanned aerial vehicles, and land-attack anti-ship cruise missiles in flight, both over sea and land. SM-6 Block I is in full rate production; production commenced in FY 2009. SM-6 Block IA is in full rate production; Low Rate Initial Production (LRIP) commenced in FY 2015. A production rate of 125 missiles per year (mix of Block I/IAs) is planned through the MYP period

c. Stability of Funding:

Sufficient funding exists within current budget controls to execute this procurement plan. The SM-6 program is one of the core Department of Navy missile programs and is approved through the current Future Years Defense Program. The Navy has demonstrated its commitment to a stable funding stream for the SM-6 MYP through every step of this year's budget process by fully funding the requirement. This commitment was reaffirmed by top level Navy and DoD leadership through its support in the final budget submission.

d. Stable Configuration:

SM-6 Block I achieved Full Operational Capability (FOC) of 266 delivered missiles on December 27, 2017 and 411 SM-6 Block I missiles have been delivered as of December 31, 2017. SM-6 Block IA LRIP missile deliveries will commence in 4QFY2018. The minimum need for the material to be purchased is expected to remain

Exhibit MYP-1, Multiyear Procurement Criteria

(MYP, Page 1 of 6)

Volume 1 - li

Exhibit MYP-1, Multiyear Procurement Criteria	Date: September 2018	
Appropriation / Budget Activity: 1507 Weapons Procurement - Navy / Other Missiles (BA-02)	P-1 Item Nomenclature: Standard Missile (SM-6)	
1307 Weapons Frocurement - Navy / Other Missiles (BA-02)	Standard Missile (SM-0)	

substantially unchanged during the planned contract period in terms of production rate, procurement rate and total quantities. All SM-6 Block I/IA missiles procured under the multi-year contract would be of the same design. Concurrent procurement of material will ensure that sufficient parts exist to maintain a stable configuration.

e. Realistic Cost Estimate:

Cost Estimates reflect experience with Standard Missile 2 (SM-2) and SM-6 manufacturing since 1996 with the SM-2 Block IIIB configuration. SM-6 actual contract data is used to support cost estimates. SM-6 Program Life Cycle Cost Estimate (PLCCE) is updated in support of a FRP decision and Cost Assessment and Program Evaluation (CAPE) Independent Cost Estimate (ICE) in 2013. The latest PLCCE revision was documented in the Navy Service Cost Position (SCP) as part of the SM-6 FRP documentation in April 2013. This estimate was in concurrence with the ICE prepared by the CAPE for FRP which was documented in the Acquisition Decision Memorandum (ADM) dated July 15, 2013 and became the basis for the current Acquisition Performance Baseline (APB) approved in August 09, 2013. The SM-6 Life Cycle Cost has also been reported in the Annual Selected Acquisition Report (SAR), the latest of which was submitted in May 2017. There is a high degree of confidence the SM-6 program can achieve the stated savings and procure the MYP missiles within the funding identified. The five year MYP will be a firm fixed price contract.

f. National Security:

The SM-6 is the primary extended range air defense weapon for AEGIS cruisers and destroyers and potentially for future combatants. SM-6 provides an extended range engagement capability to provide the air superiority and the umbrella of protection for joint U.S. forces and allies against the full spectrum of manned fixed & rotary-winged aircraft, unmanned aerial vehicles, & land attack and anti-ship cruise missiles in flight. This capability contributes significantly to the continuous protection of forward deployed ground maneuver forces as well as theater rear assets. A stable procurement will also help maintain inventory levels required for the defense of the U.S. Fleet.

3. Source of Savings:

The stability and upfront material purchase of a multiyear contract for SM-6 will enable the Prime Contractor and its suppliers to implement a more efficient planning and manufacturing cycle predicated on a roduction rate that supports the delivery cycle.

Exhibit MYP-1, Multiyear Procurement Criteria		Date: September 2018
Appropriation / Budget Activity: 1507 Weapons Procurement - Navy / Other Missiles (BA-02)	P-1 Item Nomenclature: Standard Missile (SM-6)	

4. Advantages of the MYP:

The proposed multi-year contract provides significant savings over a year-by-year contracting approach. Savings from economic order quantities and independent planning result in benefit to industry and government. In addition to providing substantial cost savings, MYP will provide the following benefits: (1) generate significant savings compared to the annual procurement cost estimates; (2) provide a long-term commitment to industry, stabilizing employment and the industrial base; (3) reduce disruptions in vendor delivery schedules; and (4) improve procurement stability. MYP would permit the use of Advance Procurement (AP) and economic order quantity (EOQ) procurement to reduce the cost of subcontractor effort, material, and components enabling greater production efficiencies and substantial cost savings.

5. Impact on Defense Industrial Base:

The stability afforded by the use of a multiyear procurement will allow the prime contractor to enter into long term agreements with suppliers, at every tier, which provide substantial benefit. Such long term agreements incentivize both the prime and the subcontractors to invest in process improvements that yield long term benefits in terms of product quality and cost. The contractor and subcontractor will be at a reduced risk when implementing production process improvements, facility improvements, tooling design improvements, and fabrication process improvements. The ability for the government and industry to enter into a long-term agreement will allow industry the opportunity to place capital investments upfront, which reduces the overall cost and improves the quality of the SM-6.

6. Multiyear Procurement Summary:

	Annual Contracts	<u>MultiYear</u> <u>Contract</u>

Description:

The TRIDENT II (D5) missiles will be carried on OHIO CLASS Fleet Ballistic Missile Submarines through 2042 and will be the intial payload for the COLUMBIA Class Fleet Ballistic Missile Submarines. The D5 Life Extension (D5LE) program will ensure that the United States continues to maintain a highly survivable strategic deterrent well into the 21st century. The TRIDENT II missile (1) enhances fleet ballistic missile submarine survivability as it increases the sea launched ballistic missile range at full payload to exploit the total patrol area available to the TRIDENT submarine. (2) minimizes total weapon system costs as it has increased the sea launched ballistic missile payload to the level permitted by the size of the TRIDENT submarine launch tube, thereby allowing mission capability to be achieved with fewer submarines, and (3) has added an efficient hard target kill capability to the sea launched ballistic missiles.

Major D5 Life Extension Costs Include:

Production Support: Funding supports D5 Life Extension (D5LE) system integration, D5LE tooling and test equipment, D5LE Flight Test Instrumentation and Analysis, support for the new Test Missile Kits (TMK's), and D5LE end of production costs.

Guidance Hardware: Includes procurement of subcomponents necessary for a complete Guidance System which consists of an Inertial Measurement Unit (IMU) and Electronics Assembly (EA). Within the IMU and EA there are numerous sub-components which are included in this cost element including Guidance Circuit Card Assemblies (CCA), Guidance Accelerometer Sensors (PIGA), Interferometric Fiber Optic Gyros (IFOG), Detector Package Assemblies (DPA) and Mk6 LE Electronic Part Sets (LEEP) and associated production support.

Fleet Return Missile Electronic SPALT Kits: Includes procurement of the 4 Missile Electronics Packages and associated production support in order to extend the life of the D5 Missile to align with the Ohio Class life

Joint Fuze Sustainment: Includes the procurement of the Arming Fuzing & Firing (AF&F) kits.

Major Operating and Support Costs Include:

Solid Rocket Motor's (SRM's) and Post Boost Control systems (PBCS's): Includes procurement of SRM's, PBCS's, and all associated costs including production regualification, HMX procurement, tooling, railcar support and Production Evaluation Testing and Static Firing.

Justification:

Funding in the TRIDENT II Mods line is required to continue the procurement of TRIDENT II missiles and currently supports the life-extension of the D5 missile.

The FY 2019 request of \$576.540 million for the D5 Life Extension (D5LE) Program, supports the redesign of the guidance system and missile electronics packages, which must be replaced to support the extended service life of the Ohio Class Submarines. FY 2019 funding procures missile electronic and guidance SPALT kits as well as other critical components required to support the extended SSBN hull life for a 14 SSBN TRIDENT II program.

Increases from FY 2018 to FY 2019 include:

- Increased QTY procurements of Guidance Electronic package subcomponents that are required to meet shipfill and STRATCOM requirements.
- An increase in Joint Fuze Sustainment for the First Production Unit(FPU) and follow on units for the Arming Fuzing and Firing (AF&F) Kit which is scheduled for December 2019. In order to meet the FPU and deployment schedule, piece part procurement increases from FY 2018 to FY 2019 are required for various commodities to include the Impact Fuze, Terminal Protection Device (TPD), Thermal Battery Assembly (TBA), Pathlength Module (PLM), Missile Interface and Controllers Module (MICM), and the Radar Module (RM). Additional hardware such as Application Specific Integrated Circuits (ASICs), Heterojunction Bipolar Transistor (HBTs), and Igniters continue to be in full production in FY 2019. As piece part procurement increases and AF&F production is fully operational, production and systems engineering support at the Department of Energy facilities increases to support the AF&F production activities.

The FY 2019 request of \$502.210 million for Operating and Support Costs funds efforts associated with the sustainment of TRIDENT II (D5) missiles to include system integration efforts, replacement of aging rocket motors, refreshes and replacement of D5 legacy tooling and test support equipment, Supportability Mods/Strategic Programs Alteration (SPALT) Insertion and modifications required for NEW START treaty obliquations.

Increases from FY 2018 to FY 2019 include:

- -Increase in Warhead Components to support the '-3 Option' program initiation efforts including but not limited to, evaluating and updating requirements documentation, SPALT development, updating facility handling/processing documentation, development of implementation concept of operations, initiation of the qualification efforts, and safety study and DoE production engineering.
- -Shape Stable Nosetip (SSNT) The Mk4A SSNT effort will convert reentry body forward shell assemblies (FSA's) from legacy carbon composite nose tips to SSNT's. FY 2019 WPN resources support development and assembly of a flight test body that will be flown in FY 2020 to evaluate developmental hardware performance.

The FY 2019 funding request was reduced by \$18.523 million to reflect the Department of Navy's effort to support the Office of Management and Budget directed reforms for Efficiency and Effectiveness that include a lean, accountable, more efficient government.

[&]quot;A" in the Delivery Schedule indicates the Contract Award Date.

Note: Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 1,000,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand). If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

[&]quot;A" in the Delivery Schedule indicates the Contract Award Date.

Note: Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 1,000,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand). If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

Description:

Funding for Missile Industrial Facilities provides for capital maintenance projects at Navy-owned Naval Industrial Reserve Ordnance Plants (NIROPS) at Sunnyvale and Santa Cruz, California, and Bacchus, Utah, in support of the Fleet Ballistic Missile program. The Bacchus, Utah, ATK facility alone consists of 583 acres, over 130 buildings and over 13 miles of road. The Sunnyvale, California facility consists of 49 acres of land and 10 buildings and the Santa Cruz, California facility consists of 271 acres of land and 29 buildings.

Justification:

As NIROP buildings are vital to D5 motor production, they must be maintained in an operational state until the D5 missile retirement. Most buildings are already over 50 years old and have exceeded their useful life. Safety related maintenance projects were originally deferred when the Department did not have a program of record to remotor the D5 missile to support its extended deployment. Subsequently, the Department approved and funded the re-motoring of D5 missiles. Additional repairs and upgrades are necessary to ensure NIROP buildings are properly maintained because of this significant extension of motor procurement. Incidents that stress the need for additional funds include: a leak in the fire branch line which left a few energetic buildings without fire protection, failure of an exhaust fan which halted operations until the unit was replaced, failure of a pneumatic valve which halted HMX production, and a failure in the liquid nitrogen pump system which shut down hardware testing. Projects planned in FY 2019 include modifications and rehabilitation of civil works, non-severable equipment, and real property. Among these projects are floor replacements, upgrades and replacements to boilers and electrical subsystems, fencing replacements (focusing on Motor transportation routes), water supply replacements and general facilities maintenance.

Description:

Tomahawk provides an attack capability against fixed and mobile/moving targets, and can be launched from both surface ships (RGM) and submarines (UGM). Tomahawk consists of the following variants: (1) RGM/UGM-109C, Land Attack Conventional; (2) RGM/UGM-109D, Land Attack Submunition Dispenser; (3) RGM/UGM-109E, Tactical Tomahawk.

The Block IV Tactical Tomahawk (TACTOM RGM/UGM-109E) preserves Tomahawk's long-range precision-strike capability while significantly increasing responsiveness and flexibility. TACTOM is capable of inflight retargeting, the ability to loiter over the battlefield, in-flight missile health and status monitoring, and battle damage indication imagery, providing a digitial look-down "snapshot" of the battlefield via a satellite data link. Other Tomahawk Weapon System functionality includes rapid mission planning and execution via Global Positioning System (GPS) onboard the launch platform and improved anti-jam GPS.

The TACTOM service life is 30 years with a 15 year deployment and recertification cycle, based on the historical production schedule of the TACTOM recertification will commence in FY 2019.

Characteristics and dimensions (approximate): Contractor: Raytheon Missiles Systems Company

Weight (with booster and capsule) (UGM-109): 4,300 pounds Weight (with booster and canister) (RGM-109): 4,300 pounds

Length (with booster): 20.5 feet

Wing Span: 8.6 feet

Cruise Speed: High Subsonic

Justification:

LI 2101 - Tomahawk

FY 2019 funding supports the transition from the production to the recertification phase of the program via continued production line shutdown funding and the induction of Fleet assets for recertification and installation of Anti-Access Area Denial (A2AD) modernization kits. FY 2019 funding supports the increase of 87 recertification kits.

FY 2019 funding also supports the increased procurement of TACTOM A2AD modernization kits, from 87 in FY 2018 to 112 in FY 2019, support equipment and associated support.

The FY 2019 funding request was reduced by \$0.167 million to reflect the Department of Navy's effort to support the Office of Management and Budget directed reforms for Efficiency and Effectiveness that include a lean, accountable, more efficient government.

Navy

- (1) In FY 2018, expended mod 1 MK14 canisters will be remanufactured to the current mod 2 configuration by Naval Munitions Command Weapons Station activities. As a result, new MK14 canisters will not be procured in FY 2018, reducing the estimated unit cost. There are no canister procurements in FY 2019.
- (2) Production line shutdown costs include \$20.164M in FY 2019 for RMS and sub-tiered vendor smart shutdown. This value accounts for unique elements associated with the energetic and unique/proprietary electronic sub vendors in a long range missile system. The suspension of the Tomahawk line will include three primary RMS facilities at Camden, the Rita Rd production facility, and Integration and Test facility in Tucson, Arizona. It will include disposition of tooling at Raytheon Missile Systems, and multiple vendors including twelve primary vendors integral to the production of the TACTOM. Suspension efforts at these facilities will include elements of the smart suspension guidelines to document, archive, preserve, store TACTOM unique production process/test documentation, test equipment, tooling, support equipment, and address environmental issues mandatory for Tomahawk contractors to recertify missiles as the program transitions from the production to the depot phase.
- (3) Support Equipment in FY 2019 is for oversight support for the Mid-Body Range Safety System (MRSS) which is used within Tomahawk Flight Tests (TFTs) to control missile flight capabilities. MRSS Kit quantity is based on the projected Tomahawk Flight Test profile required to support operational flight testing requirements associated with Tomahawk modernization.

[&]quot;A" in the Delivery Schedule indicates the Contract Award Date.

Note: Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 10,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand). If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

Footnotes:

(5) MSR/MAX production rates are based on canister contract constraints. Multiple canister configurations are manufactured at BAE in Aberdeen, South Dakota for multiple customers in the same facility. The family includes MK7, MK8, MK13, MK21 and MK236. As a result of the broad number of customers, the demand level is sufficient for the industrial base. There is no specific MSR/MAX for the MK14 TACTOM canister. MSR/MAX would be a factor of the entire family of canisters.

Description:

The Tactical Tomahawk (TACTOM) Anti-Access Area Denial (A2AD) Modernization kits consist of the Integrated Single Box Solution (ISBS) radio, two new antennas and associated cabling, a new mid-body cover, and changes to the aft-body structure and aft-body cover. The ISBS radio is replacing the existing Satellite Data Link Terminal (SDLT) and the new Ultra High Frequency (UHF) antenna is replacing the existing UHF antenna. A second antenna is being added to the missile to accommodate a second frequency band. The changes to the missile are driven by the obsolescence of the SDLT hardware and the obsolescence of the UHF Demand Assigned Multiple Access (DAMA) communications infrastructure that is being phased out of service. An Engineering Change Proposal (ECP) will be developed in FY 2018 to implement the hardware and software changes to the missile. Tomahawk Weapon System Baseline IV, Operational Requirements Document (SN 641-76-04), Revision 3, 11 August 2004.

Currently, all TACTOMs will be updated with the A2AD hardware as part of recertification starting in FY 2019. Projected quantity over the life cycle is 3.992. Installations begin in FY 2019.

The TACTOM service life for RGM109E and UGM109E Block IV Tomahawk cruise missiles is 30 years with a 15 year deployment and recertification cycle. According to the current Block IV AUR production schedule, recertification will begin in FY 2019. The TACTOM recertification includes FY 2018 funding associated with the non-recurring engineering across the prime contractor and sub-tiered vendor base required for the standup of the Tactical Tomahawk recertification line. Depot standup activities include the establishment and validation of the recertification line at Raytheon, as well as 12 sub-vendors. This will include updating, refurbishing, and replacing existing Tooling and Test Equipment which has been in existence from the early 1980s (Tomahawk Block II/III Depot and Production lines) along with the unique Tactical Tomahawk tooling and Test Equipment procured in FY 2003/2004. All hardware required to conduct the verification and validation process, which includes completion of work packages and conducting a First Article test, needs to be in place before commencing recertification in FY 2019.

The yearly recertification profile will limit missile backlog within the Fleet due to the expiration of life limiting components. This activity includes the costs associated with the Raytheon labor, vendor recertification of specific components (i.e. mechanical and electrical components), recertification of the MK 45 submarine capsule, missile consumables, fuze recertification and fuel. Recertification is planned to occur concurrently with installation of A2AD Modernization Kits, which will replace the existing SDLT radio and antenna.

Nov 2023

⁽⁶⁾ Recertification kit unit cost decrease across the FYDP associated with the increase in quantity procured. Increases in installation costs across the FYDP are directly correlated to the increasing quantity of kits procured. Installation costs are based on 453 factory touch hours per missile and 72 factory touch hours per MK45 CCLS for the first year of recertification. In the following years, installation costs are calculated

Exhibit P-3a, Individual Modification: PB 2019 Navy		Date: February 2018

using learning and labor curves that are consistent with statistics in the Block IV Production cost model. Install costs have been budgeted on an annualized basis within the year that the install will occur. Due to procurement lead times, the A2AD modernization kit is installed one year following procurement.

- (7) The cost model continues to be refined with the results of engineering analysis through the completion of recertification studies, which has led to decrease in the quantity of A2AD kits in FY 2018.
- (8) Unique Government and contractor production support and recurring fixed costs that is required per lot of A2AD Modernization Kit. Funding reflects required obsolescence mitigation including avionic, electrical, and structures bill of material development, and obsolescence ECP forecasting in order to support the extended end of service date.
- (9) Includes unique support and test equipment required to support the integration of the A2AD Modernization Kit during recertification. This would include planning, resourcing and implementing management actions to acquire and support the equipment required to sustain and validate the A2AD capability/functionality ensuring that the TACTOM is available to the warfighter when it is needed.
- (10) Costs of support equipment management, computer resources support, training and training support, ILS program management, and packaging, handling, storage and transportation as associated with the A2AD Modernization Kit.
- (11) Unique government and contractor production support and recurring fixed costs that is required per lot of recertification kit. Funding reflects required obsolescence mitigation including avionic, electrical, and structures bill of material development, and obsolescence ECP forecasting in order to support the extended end of service date.
- (12) Includes unique support and test equipment required to support the integration of the recertification kit. This would include planning, resourcing, and implementing management actions to acquire and support the equipment required to sustain and validate the capability/functionality ensuring that the TACTOM is available to the warfighter when it is needed.
- (13) Costs of support equipment management, computer resources support, training and training support, ILS program management, and packaging, handling, storage and transportation as associated with the recertification kit.
- ⁽¹⁴⁾ Funds the MK-45 vendor base required to recertify and extend the service life of the CCLS barrels, retains the production line at Raytheon needed to assemble and breakdown the barrels, funds the vendor base required for the functionality of the MK-45 to include the gas generators and NSWC Indian Head who produces the powder for the gas generator manufacturer.
- (15) FY 2018 Depot standup funding in the amount of \$20.544M is required for the prove in of the end-to-end recertification processes. The process takes five Block IV missiles through the entire recertification process. This is essential to qualifying test and tooling equipment, refining recertification processes and exercising quality/inspection procedures. All of which ensures that the end-to-end recertification line is ready for induction of missiles in FY 2019.

Description:

The Advanced Medium Range Air-to-Air Missile (AMRAAM) is the premier all-eventher, all-environment radar guided missile developed jointly by the Air Force and Navy. The Air Force is the lead service. AMRAAM is a small, light, fast missile with improved capabilities against very low and high-altitude targets in an electronic attack (EA) environment. The AIM-120D provides increased performance from improved kinematics, GPS-aided navigation, a two-way data link; which enhances aircrew survivability and network compatibility, and new guidance software to combat a technologically capable adversary, reduce risk in air combat scenarios, and limit missile defense challenges.

^{*}Title represents 1) the Number / Title for Items; 2) the Number / Title [DODIC] for Ammunition; and/or 3) the Number / Title (Modification Type) for Modifications.

Note: Totals in this Exhibit P-40 set may not be exact or sum exactly due to rounding.

Justification:

FY 2019 funding procures 140 AMRAAM missiles in support of warfighter requirements. Quantity and funding in FY 2019 is limited due to parts obsolescence of the base AIM-120D version and line start-up for the Form, Fit, and Function (F3R) version of the missile. FY 2019 buy will be comprised of a combination of AIM-120D and F3R versions based on final contract negotiations.

Funding also provides required support costs such as: test and technical production support, procurement of training equipment, diminishing manufacturing sources, and test equipment/test equipment upgrades to support the AIM-120D configuration.

The FY 2019 funding request was reduced by \$0.862 million to reflect the Department of Navy's effort to support the Office of Management and Budget directed reforms for Efficiency and Effectiveness that include a lean, accountable, more efficient government.

OCO.

FY 2019 Overseas Contingency Operations (OCO) funding is requested to replenish one AMRAAM (AIM-120) expended in direct support of combat operations during Operation Inherent Resolve.

Exhibit P-5, Cost Analysis: PB 2019 Navy		Date: February 2018
Appropriation / Budget Activity / Budget Sub Activity: 1507N / 02 / 2	P-1 Line Item Number / Title: 2206 / AMRAAM	Item Number / Title [DODIC]: 1 / AMRAAM
ID Code (A=Service Ready, B=Not Service Ready) :	MDAP/MAIS	S Code:

Footnotes:

- (1) Unit cost calculations are based on combined procurement of Navy, AF and FMS buys for each fiscal year. The FY 2019 unit cost increase from FY 2018 budget reflects USAF quantity reductions.
- (2) FY 2019 DMS costs include obsolescence and loss of manufacturing sources for the Form, Fit, Function Refresh (F3R) program (13 Circuit Card Assemblies (CCA)) to mitigate obsolescence in the guidance section which will enable single integration, and consolidated qualification and flight testing along with the Central Processing Unit (CPU) Spike Extension Program (1 CCA). The costs are prorated among Navy, AF, and FMS.
- (3) Increase in FY 2019 is to procure unique tooling and test equipment required to incorporate redesigned F3R replacement components into the production line.
- (4) Engineering Change Orders line provides funding to test and qualify class I engineering change proposals by the prime vendor into missile production. Fluctuations correspond directly with total cost of hardware procured.
- (5) Containers are required to maintain pace with quantities, ensure the updated in-container reprogramming capability continues and replace outdated/damaged containers. The containers are typically funded every four years based on procurement quantities.
- (6) Training equipment request includes funding for AMRAAM Telemetry System (ATS) used to collect missile performance data for in production missiles for product improvement within the current performance envelope.

⁽⁷⁾ FY 2016 AUR deliveries have been delayed due to rebaselining to a quarterly vice a monthly schedule and adjust for overall production capacity

⁽⁸⁾ AIM-120 MSR is 400 missiles per year, consisting of USN, USAF, and approved FMS procurement with no less than 100 of a particular variant. Max factory capacity enables production of 960 missiles. FY19 production capacity is constrained to 571 missiles, of which at least 210 are FMS missiles, due to ramp rate of Form, Fit, Function Refresh (F3R) and parts limitation.

⁽⁹⁾ FY 2016 CATM deliveries have been delayed due to rebaselining to a quarterly vice a monthly schedule and adjust for overall production capacity. The procurement lead time has increased by 6 months to allow vendor additional time to obtain long lead items required for production.

^(‡) Delivery rows marked with this symbol indicate that they are funded through a separate Line Item. See the respective components' exhibits for details, including the full delivery schedule. "A" in the Delivery Schedule indicates the Contract Award Date.

Footnotes:

(8) AIM-120 MSR is 400 missiles per year, consisting of USN, USAF, and approved FMS procurement with no less than 100 of a particular variant. Max factory capacity enables production of 960 missiles. FY19 production capacity is constrained to 571 missiles, of which at least 210 are FMS missiles, due to ramp rate of Form, Fit, Function Refresh (F3R) and parts limitation.

Note: Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 1,000,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand). If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

Description:

The AIM-9X Block II/II+ Sidewinder (AIM-9X Blk II/II+) continues the evolution of the AIM-9 series of missiles. This missile program delivers a launch and leave, air combat munition that uses passive Infrared (IR) energy to acquire and track enemy air targets and complements the radar guided Advanced Medium Range Air-to-Air Missile (AMRAAM). Air superiority in short range engagements is essential to the Department of the Navy, and this missile provides first shot, first kill opportunities against enemy targets employing IR countermeasures. Anti-Tamper features have been incorporated to protect improvements inherent in this design. The AIM-9X Block II missile is critical to project power and win decisively in accordance with the Fiscal Year 2015 Defense Planning Guidance and Chief of Naval Operations' Navigation Plan for 2015-2019.

AIM-9X is a Post Milestone C, Acquisition Category IC (ACAT-IC) joint service program led by the Department of the Navy. In June 2011, the Milestone Decision Authority (MDA) established the AIM-9X Block II missile program which was approved for entry at Milestone C for Low Rate Initial Production (LRIP). The 2366 A/B certification and Acquisition Program Baseline for AIM-9X Block II was signed December 23, 2011, and the Block I program was terminated. In August 2015, the program received approval for Full Rate Production (FRP), and the Acquisition Program Baseline was re-established.

In FY 2017, the program began to procure a third variant of the missile labeled the AIM-9X Block II PLUS (Block II+) to satisfy the requirements of the Joint Strike Fighter platform. This version of the missile is being produced on the same production line as the AIM-9X Block II missile. For contracting purposes, the nomenclature of the AIM-9X Block II missile will be identified as AIM-9X-2 and the AIM-9X Block II+ missile will be identified as AIM-9X-3

Justification:

FY 2019 provides funding to procure the fifth lot of Full Rate Production (FRP) AIM-9X Block II (Blk II) missiles, as well as the third lot of AIM-9X Block II Plus (Blk II+) missiles for the Navy. FY 2019 also continues the procurement of missiles for the Army Indirect Fire Protection Capability Increment 2 (IFPC2) program. The program unit costs are based on quantities procured by all the US Navy, US Air Force and US Army as well as Foreign Military Sales customers.

Total Program quantity by service includes a mix of All Up Round (AUR) missiles and Captive Air Training Missiles (CATM) as such:

The Navy will procure 3,937 total missiles under this Budget Line Item: 1,289 Block I missiles (885 AURs and 404 CATMs) and 2,648 Block II missiles, including Block II+ (2067 AURs and 581 CATMs). In addition, the Navy procured 63 Block I missiles in FY 2001 under the AIM-9M Modification program (48 AURs and 15 CATMs).

The Air Force will procure 5,030 total missiles under Budget Line Item 3479 (P1-4): 1,678 Block I missiles (1,093 AURs and 585 CATMs) and 3,352 Block II missiles, including Block II+ (2,859 AURs and 493 CATMs). In addition, the Air Force procured 67 Block I missiles in FY 2001 under the AIM-9M Modification program (45 AURs and 22 CATMs).

The Army will procure AIM-9X Block II missiles under Budget Line Item C6100 (P1-3).

The FY 2019 funding request was reduced by \$0.256 million to reflect the Department of Navy's effort to support the Office of Management and Budget directed reforms for Efficiency and Effectiveness that include a lean, accountable, more efficient government.

OCO:

Navy

LI 2209 - Sidewinder

FY 2019 Overseas Contingency Operations (OCO) funding is requested to replenish one Sidewinder (AIM-9X) expended in direct support of combat operations during Operation Inherent Resolve.

Remarks:

[Flyaway]

(†) indicates the presence of a P-5a

Footnotes:

- (1) The All Up Round (AUR) Block II procures tactical missiles used for combat and aggression deterrence. The unit cost increase from FY 2018 to FY 2019 reflects total AUR quantity decrease across all services. The OCO funding in FY 2019 is required to replace one missile fired during operation Inherent Resolve in June 2017. FY 2017 unit costs reflect actual contract award pricing, and FY 2018 and out unit cost reflects the AIM-9X Block II. Unit cost changes are heavily driven by quantity changes from year to year.
- (2) The Captive Air Training Missile (CATM) are used in pilot training in non-combat areas and do not launch. They are similar to AUR missiles but do not include a rocket motor or warhead. FY 2019 CATM unit cost increase is associated with a net decrease in CATM quantity procurement across all services.
- (3) The AUR Block II Plus procures tactical missiles for the Joint Strike Fighter Program. The Navy quantity decreased from 12 in FY 2018 to 8 in FY 2019 resulting in a increase in cost per unit.
- (4) The Engineering Change Orders line provides funding to test and qualify class 1 engineering changes proposed by the prime vendor into missile production. Program does not anticipate changes for FY 2017 and FY 2018. The increase in FY 2019 reflects the program cost model estimates and is based on total hardware procured.
- (5) DMS provides funding to design, develop, test and qualify form/fit/function replacement components to the production missile as a result of changes in sub-vendor manufacturers.
- (6) The Government Furnished Equipment line procures government owned hardware required to produce the missiles. The primary item procured are warheads. The increase from FY 2017 to FY 2018 is due to increased total hardware buy.
- (7) The ST/STE line provides funding for production tooling and test equipment to the AIM-9X manufacturing line to ensure missiles are produced efficiently, and within specifications. The decrease from FY 2018 to FY 2019 reflects cyclical production tooling updates. Every 3 years the program requires production tooling to be replaced.
- (8) Containers are procured to ship missiles and are procured 1 for every 4 missiles of each variant (missile variants cannot be mixed within a container). The slight increase in unit cost above inflation from FY 2018 to FY 2019 is due to rounding.
- (9) The production tech support line includes funding to manage technical documentation, training development and delivery, production support, and management of government owned property, to support production of AIM-9X configurations.
- (10) The PSE line provides gauges and equipment to calibrate government furnished rocket motors.
- (11) The training support line provides technical publications and training manuals to fleet maintainers.
- (12) The training equipment line includes the Telemetry (TM) Kits used to collect flight data for production qualification testing and weapons safety evaluations. TM kits are based on missile quantities procured and are manufactured by Naval Air Warfare Center, China Lake.
- (13) The government in-house support line provides US Government Systems Engineering and Project Management support at Naval Air Warfare Centers for the production of the AIM-9X missile to ensure compliance with joint service developed cost, schedule and performance requirements.

^(‡) Delivery rows marked with this symbol indicate that they are funded through a separate Line Item. See the respective components' exhibits for details, including the full delivery schedule.

Note: Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 1,000,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand). If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

Footnotes

(14) The Manufacturing Production Lead Time after Award has increased 7 months consistent with actual manufacturing schedules in the FY 2016 and 2017 production contract awards.

Description:

Joint Standoff Weapon (JSOW) is a joint United States Navy (USN)/United States Air Force (USAF) program with the USN as the lead service. The JSOW program provides an air-to-ground glide weapon (AGM-154) capable of attacking a variety of targets during day, night, and adverse weather conditions for use against fixed area targets and moving maritime targets. The JSOW enhances aircraft survivability as compared to alternate interdiction weapon systems by providing the capability for launch aircraft to standoff outside the range of most target area surface-to-air threat systems. The JSOW Global Positioning System (GPS)/Inertial Navigation System (INS) capability allows several target kills per aircraft sortie.

The JSOW baseline BLU-97 variant (AGM-154A) has been integrated on USN (F/A-18C/D/E/F) and USAF (F-16C/D, B-2 and B-52) aircraft. The JSOW BLU-108 (AGM-154B) variant provides an anti-armor/tank capability. The JSOW unitary variant (AGM-154C) utilizes the common airframe of the AGM-154A and AGM-154B variants and incorporates an infrared uncooled seeker with autonomous targeting acquisition. The payload includes a 500 pound class Broach multi-stage warhead. AGM-154C was approved for Low Rate Initial Production (LRIP) on 26 June 2003. Full Rate Production (FRP) of the AGM-154C began in December 2004. A Network Enabled Weapon (NEW) moving maritime target capability has been incorporated in JSOW-C production units (AGM-154C-1 variant) starting with the FY 2009 procurement. The AGM-154-C-1 units retain the basic AGM-154C capability against fixed land targets.

Program Elements for Code B Items: N/A

Note: Totals in this Exhibit P-40 set may not be exact or sum exactly due to rounding.

Justification:

FY 2019 funding is required for Telemetry Instrumentation Kit (TIK) 2.0 component assembly certification. TIKs are necessary to support the life cycle of the weapon system; including fleet training events, joint and fleet exercises and Tactics, Techniques and Procedure (TTP) development.

The FY 2019 funding request was reduced by \$0.001 million to reflect the Department of Navy's effort to support the Office of Management and Budget directed reforms for Efficiency and Effectiveness that include a lean, accountable, more efficient government.

Footnotes:

- (1) Cost Code JS895 Telemetry provides support of Telemetry Instrumentation Kits (TIKs) and TIK 2.0 effort. TIKs are used to record flight data, and also has a flight termination system for range safety. TIKs are necessary to support training events and meet platform requirements. FY 2018 funding increases to complete TIK NRE and TIK 2.0 procurement.
- (2) Prior year values contain costs for all JSOW variants (AGM-154A, AGM-154B, AGM-154C, and AGM-154C-1).

[&]quot;A" in the Delivery Schedule indicates the Contract Award Date.

Note: Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 10,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand). If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

Footnotes:

⁽³⁾ Final deliveries were delayed due to GFE delays. Received last 18 deliveries 11 Dec 2017.

Description:

The SM-6 Block I provides an extended range engagement capability to provide the air superiority and the umbrella of protection for joint U.S. forces and allies against the full spectrum of manned-fixed and rotary-winged aircraft, unmanned aerial vehicles, and land attack and anti-ship cruise missiles in flight. This capability contributes significantly to the continuous protection of forward deployed ground maneuver forces as well as theater rear assets.

The SM-6 is the primary extended range air defense weapon for AEGIS cruisers and destroyers and potentially future combatants.

[P5 / FE002 SM-6 Block IA ECP]: Production cut-in decision for the Engineering Change Proposal (ECP) for the SM-6 Block IA configuration was included in the FY 2015 SM-6 Production Contract. The ECP cost line shown in FY1 2017 is additional cost required to implement the ECP and procure the maximum number of SM-6 Block IA All Up Rounds (AURs), limited by maximum production rate. The Navy will procure SM-6 Block I and SM-6 Block IA missiles, not to exceed the quantities shown here. In FY 2017, the Cost Element 1.1.1 (FE002 SM-6 Block I All Up Round) combined with 1.1.2 (FE002 SM-6 Block IA ECP) recurring hardware costs procure both configurations of SM-6. The SM-6 Block IA ECP is planned to be at FRP procurement rates starting in FY 2018. In FY 2018 and out, the funding from Cost Elements 1.1.1 and 1.1.2 have been combined and realigned to Cost Element 1.1.3 (SM-6 Block I/IA All Up Round Missile) and the annual unit cost is a blended unit cost across SM-6 BLK I and BLK IA variants. Further detail can be provided at a higher classification level.

[P5 / SM-6 Block I/IA All Up Round Missile]: The budget reflects a funding profile for a proposed five-year Multiyear Procurement beginning in FY 2019 and completing in FY 2023. Advance Procurement information is provided in exhibit 2234C.

Note: Totals in this Exhibit P-40 set may not be exact or sum exactly due to rounding.

Justification:

FY 2019 provides funding to procure 125 SM-6 Block I and SM-6 Block IA missiles to support warfighter requirements, as well as, required support costs such as production engineering, Diminishing Manufacturing Sources (DMS), containers, fleet documentation, and install/checkout equipment.

The budget reflects a funding profile for a proposed five-year Multiyear Procurement beginning in FY 2019 and completing in FY 2023. Advance Procurement information is provided in exhibit 2234C (P10).

The FY 2019 funding request was reduced by \$3.785 million to reflect the Department of Navy's effort to support the Office of Management and Budget directed reforms for Efficiency and Effectiveness that include a lean, accountable, more efficient government.

In FY 2018 and out, cost element 1.1.3)(SM-6 Block I/IA All Up Round (AUR) Missile) captures the aggregate missile cost for SM-6 BLKI and IA. The Navy will procure the maximum number of SM-6 Block IA All Up Rounds (AURs), limited by maximum production rate. The Navy will procure a combination of SM-6 Block I and SM-6 Block IA missiles not to exceed the quantities requested. Final procurement quantities for FY 2017 and FY 2018 will be determined upon completion of contract negotiations.

LI 2234 - Standard Missile Navy **UNCLASSIFIED**

⁽¹⁾ Production cut-in decision for the Engineering Change Proposal (ECP) for the SM-6 Block IA configuration was included in the FY 2015 SM-6 Production Contract. The ECP cost line shown in FY 2017 is additional cost required to implement the ECP and procure the maximum number of SM-6 Block IA All Up Rounds (AURs), limited by maximum production rate. The Navy will procure SM-6 Block IA and SM-6 Block IA missiles, not to exceed the quantities shown here. Further detail can be provided at a higher classification level.

⁽²⁾ FY 2017 calculated unit cost is based on the SM-6 Block I AUR only. FY 2018 combined cost code 1.1.1) FE002 SM-6 Block I All UP Round Missile and 1.1.2) FE002 SM-6 Block IA ECP into 1.1.3) SM-6 Block I/IA All UP Round Missile to provide the blended costs of the Block I and Block IA missiles. The Navy remains committed to procuring the maximum number of SM-6 Block IAs, limited by maximum production rate. The SM-6 Block IAs are more technologically advanced than the SM-6 Block I and therefore have higher unit cost. The budget reflects a funding profile for a proposed five-year Multiyear Procurement beginning in FY 2019 and completing in FY 2023.

⁽³⁾ Canisters are not procured through the prime contractor and are not included in the Multiyear Procurement Contract. FY 2019 increase due to the mix of missiles being procured. Mod 3 Canisters are procured for both BLKI and BLKIA, but require additional cost for parts and engineering to convert the BLKI Mod 3 Canisters into BLKIA Mod 4 canisters. The increase in FY 2019 reflects the additional procurement of BLKIAs

[&]quot;A" in the Delivery Schedule indicates the Contract Award Date.

Note: Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 1,000,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand). If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

 $^{^{(5)}}$ MSR reflects a ramp up to a stable production rate for SM-6 Block IA.

⁽⁶⁾ Production cut-in decision for the Engineering Change Proposal (ECP) for the SM-6 Block IA configuration was included in the FY 2015 SM-6 Production Contract. The ECP cost line shown in FY 2017 is additional cost required to implement the ECP and procure the maximum number of SM-6 Block IA All Up Rounds (AURs), limited by maximum production rate. The Navy will procure SM-6 Block I and SM-6 Block IA missiles, not to exceed the quantities shown here. Further detail can be provided at a higher classification level.

Description:

The SM-6 Block I provides an extended range engagement capability to provide the air superiority and the umbrella of protection for joint U.S. forces and allies against the full spectrum of manned-fixed and rotary-winged aircraft, unmanned aerial vehicles, and land attack and anti-ship cruise missiles in flight. This capability contributes significantly to the continuous protection of forward deployed ground maneuver forces as well as theater rear assets. The SM-6 is the primary extended range air defense weapon for AEGIS cruisers and destroyers and potentially future combatants.

^{*}Title represents the P-10 Title for Advance Procurement.

Note: Totals in this Exhibit P-40 set may not be exact or sum exactly due to rounding.

Justification:

The budget reflects a funding profile for a proposed five-year Multiyear Procurement beginning in FY 2019 and completing in FY 2023. The proposed multiyear procurement contracts would provide for the procurement of up to 625 Standard Missile-6 (SM-6) guided missiles. The use of Advanced Procurement provides economic order quantity (EOQ) to reduce the cost of subcontractor effort, material, and components enabling greater production efficiencies and substantial cost savings.

Funding covers EOQ in support of the FY 2019-2023 MYP contract. EOQ will fund the procurement of MK72 Booster, MK104 Dual Thrust Rocket Motors (DTRM) and Guidance Sections. Booster is a 26 month lead time due to the unique steel for the case and additional time for mating with a (TVA) Thrust Vector Actuator. The DTRM has a 22 month lead time due to the specialty steel required for manufacturing. The guidance section takes 24 months to deliver due to the lead time in the specialty Circuit Card Assemblies.

Description:

Small Diameter Bomb Increment II (SDB II) is an ACAT 1D program providing the warfighter a capability to attack mobile targets in all weather. The Air Force (USAF) is the lead service. SDB II addresses the following warfighter requirements: attack mobile targets; multiple kills per pass; multiple ordnance carriage; all weather operations; near-precision munitions capability; capability against fixed targets; reduced munitions footprint; increased weapons effectiveness; minimized potential for collateral damage; reduced susceptibility of munitions to countermeasures; and a migration path to net centric ops capability.

Threshold aircraft is the F-15E for the USAF and F-35B and F-35C for the Department of Navy (DON). Objective aircraft include the F/A-22, B-1, B2, F-117, F-16, B-52, Predator B, F/A-18 E/F. Milestone C was achieved June 2015.

The Acquisition Decision Memorandum was signed 4 June 2015. Lots 1 through 3 are Air Force only procurements; Lot 1 awarded 12 June 2015. SDB II will be integrated on F-35B and F-35C using BRU-61 (due to the cancellation of the Joint Miniature Munitions Bomb Rack contract), and on F/A-18 E/F using BRU-55. The F/A-18 E/F Initial Operational Capability (IOC) is planned for FY 2020; F-35 IOC is planned for FY 2022. The DoN SDB II inventory objective is 5,000 weapons.

Note: Totals in this Exhibit P-40 set may not be exact or sum exactly due to rounding.

Justification:

FY 2019 provides funding to procure 750 SDB II All Up Rounds (AUR) to support warfighter requirements as well as containers, Government In-house (GIH) production support, software updates, weapon load crew trainers (WLCT), integrated logistics support, and peculiar support equipment.

The FY 2019 increase in quantity reflects the joint procurement strategy with the Air Force for the lot 5 contract.

Current contract for Production Lots/Service includes the following:

Lot 1 - USAF (144)

Lot 2 - USAF (250)

Lot 3 - USAF (312)

Lot 4 - USAF (460) / USN (90)

Lot 5 - USAF (300) / USN (750)

Footnotes:

⁽¹⁾ The Department of the Navy is buying two-place containers. One container is required for every two SDB II weapons and every two Weapon Load Crew Trainers. As quantity of SDB II increases, so will total cost for containers. Cost reflected is the total cost for these containers. Lots 1-5 (FY 2018 and FY 2019) are competitively priced options to the SDB II EMD contract. Lots 6-11 will be awarded under sole source contract, therefore, prices will be higher.

⁽²⁾ Government In-House (GIH) Production support is government labor in support of the production of the All Up Round to include engineering and logistics.

⁽³⁾ Increase in FY 2019 is for software updates to be performed.

^(‡) Delivery rows marked with this symbol indicate that they are funded through a separate Line Item. See the respective components' exhibits for details, including the full delivery schedule.
"A" in the Delivery Schedule indicates the Contract Award Date.

Note: Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 1,000,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand). If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

Description:

Rolling Airframe Missile (RAM) is a high fire-power missile system used to defeat Anti-Ship Cruise Missiles (ASCMs), as well as other airborne threats. RAM is a surface-to-air missile with passive dual-mode radio frequency/infrared (RF/IR) guidance and an active-optical proximity and contact fuse. RAM has minimal shipboard control systems and is autonomous after launch. Effective against a wide spectrum of existing threats, RAM Block 1 IR upgrade incorporates IR "all-the-way-homing" to improve performance against evolving passive and active ASCMs. RAM Block 2 provides increased kinematic capability against highly maneuvering threats and improved RF detection against low probability of intercept threats. The RAM missile is fired from a RAM Guided Missile Launching System (GMLS) (MK-49), which holds 21 RAM rounds. RAM is also fired from the SeaRAM Anti-Ship Missile Defense System (MK-15 MOD 31-33) which holds 11 rounds.

COOPERATIVE AGREEMENTS:

RAM is a cooperative program with the Federal Republic of Germany. The U.S. and Federal Republic of Germany cooperatively produce Block 1 missiles, launchers, and Ordnance Alterations (ORDALTs) through the Block 1 production Memorandum Of Agreement (MOA), Amendment 2 signed on 28 September 2010. The Block 2 production Memorandum of Understanding (MOU) was signed on 19 March 2013 with the U.S and Federal Republic of Germany to cooperatively produce Block 2 missiles, launchers, and ORDALTs and continue to provide support for Block 1 configuration through FY 2013 - FY 2019.

[P5 / EF008 Block 2 Missile]: Provides funding to procure RAM Block 2 All Up Rounds (AUR) including telemetry hardware to support fleet training requirements.

[P5 / EF850 Component Improvement/DMS]: Provides RAM Design Agent engineering and technical support for component replacement and improvement. The RAM Guided Missile Round Pack (GMRP) is a build to print missile that includes commercial-off-the-shelf hardware. Support includes the development/review/approval/verification of production engineering change proposals and obsolescence mitigation efforts. This support is required to ensure that the build to print package continues to support the system performance specs as production matures. With Block 2 Developmental Testing/Operational Testing underway, initial production and testing additional component improvement requirements were identified. These requirements address software/firmware/hardware corrections of production start up issues and test flight concerns as well as GMRP reprogramming. Software baseline updates require formal qualification testing at the four software components (IR Processor, Evolved RF Processor, Control Section Processor and Guidance Processor) and All Up Round. It also requires each individual component piece of test equipment and the all up round test station to be updated with the software baseline. Funding also supports replacement of key components due to end of lifetime buy.

[P5 / EF957 Container]: Procures containers for transporting the GMRP.

^{*}Title represents 1) the Number / Title for Items; 2) the Number / Title [DODIC] for Ammunition; and/or 3) the Number / Title (Modification Type) for Modifications.

Note: Totals in this Exhibit P-40 set may not be exact or sum exactly due to rounding.

Justification:

FY 2019 increase supports the RAM Block 2 procurement increase from 60 units in FY 2018 to 120 units in FY 2019.

The unit costs reflected in FY 2016 and FY 2017 reflect the negotiated and awarded FY 2016 / FY 2017 production contract.

FY 2018-FY 2022 funding has been realigned from RAM (WPN BLI 2242) to Ship Self Def (Engage: Hard Kill) (RDTEN PE 0604756N) and Ship Missile Support Equipment (OPN BLI 5231) to support RAM Block 2 Raid Engineering Change Proposal (ECP). The RAM Block 2 Raid ECP will provide an upgraded seeker and Missile-to-Missile Link (MML) capability to counter emerging complex raid threats.

FY 2019-FY 2023 funding increase supports RAM Block 2 procurements up to 120/150/155/270/270.

The FY 2019 funding request was reduced by \$.08 million to reflect the Department of Navy's effort to support the Office of Management and Budget directed reforms for Efficiency and Effectiveness that include a lean, accountable, more efficient government.

Remarks:

[Support Cost] Additional efforts required to support DMS is driving the increase in production support for updating the technical data package (TDP). Production support is an annual requirement which supports all on-going production and is independent of contract award quantities.

Footnotes:

- (1) FY 2018 unit cost exceeds approved OMB / OSD inflation factor from FY 2017 due to quantity reduction from 120 to 60 missiles. Unit costs will decreased in FY 2019 through FY 2023 due to increase in production. FY 2019 quantity increased from 60 to 120.
- (2) DMS reflects normal levels of manufacturing obsolescence associated with Field-Programmable Gate Arrays (FPGA), flash drives, capacitors, resistors, inductors, diodes, adhesives, chemicals (rocket motor), materials (potting, fiberglass, printed circuit cards, alloys), etc. RAM also has a requirement for long term storage making it susceptible to tin whiskers. Therefore, many components require unique tin-lead alloy or lead coating to prevent this phenomenon. These components historically have recurring short time frame obsolescence issues.
- (3) Production support increase due to RAM BLK 2 GMRP Production increase from 60 in FY 2018 to 120 in FY 2019.
- (4) Production support increase due to RAM BLK 2 GMRP Production increase from 60 in FY 2018 to 120 in FY 2019.

[&]quot;A" in the Delivery Schedule indicates the Contract Award Date.

Note: Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 1,000,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand). If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

Footnotes:

(5) RAM program office works with prime contractor to coordinate Department of Defense, Foreign Military Sales, third party sales and cooperative German sales to preclude production gaps.

Description:

The Joint Air-to-Ground Missile (JAGM) is an air-launched missile system that will incorporate multi-mode seeker technology thus providing advanced Line-of-Sight and Beyond-Line-of-Sight precision fire and-forget seeker targeting capabilities resulting in increased lethality against soft, hardened, moving, stationary, land and maritime threats. JAGM improves the warfighter's capability in adverse weather, day or night, and in obscured/countermeasure environments. The JAGM Increment 1 system will replace aviation-launched, Tube-launched, Optically-tracked, Wire-guided (TOW) missile, and Helicopter Launched Fire-&-Forget (HELLFIRE) Missile Systems. JAGM is an Army-led joint program that addresses rotary wing and unmanned aerial vehicle requirements. The Department of Navy threshold platform is the AH-1Z. The JAGM system includes missile, trainers, containers, support equipment, and software modifications to the M-299 launcher. Missile configurations include the JAGM Tactical Missile, Captive Air Training Missile. The Department of Navy total procurement for Joint Air-to-Ground Missile is 6,016 missiles.

Note: Totals in this Exhibit P-40 set may not be exact or sum exactly due to rounding.

Justification:

FY 2019 funding will be used to procure the JAGM Low Rate Initial Production (LRIP) Lot 3 buy of 75 missiles, Other Production Support (OPS), training missiles, and production related engineering and logistics. Gross/Weapon System Unit Cost in FY 2019, as compared to FY 2017, increased greater than the rate of inflation due to the transition from a pre-negotiated, Fixed-Price Engineering Manufacturing & Development (EMD) contract option to a renegotiated contract incorporating technical and cost data obtained from the EMD phase.

^(‡) Delivery rows marked with this symbol indicate that they are funded through a separate Line Item. See the respective components' exhibits for details, including the full delivery schedule. "A" in the Delivery Schedule indicates the Contract Award Date.

Note: Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 10,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand). If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

Footnotes:

(4) Army deliveries for FY17 contract total 373 from July 2018 through March 2019. While Navy has no quantities procured with FY18 funds, Army procures 824 with deliveries from April 2019 through March 2021.

Description:

AGM-114 Hellfire is a family of laser guided missiles employed against point and moving targets by both rotary and fixed wing aircraft. The family of Hellfire missiles includes, but is not limited to, AGM-114B/K/ K2/K2A/M/N/N-5/P/P+/Q/Q6 variants. These variants include shaped charge warheads for use against armored targets and blast fragmentation warheads for use against urban structures. The AGM-114N is a thermobaric blast fragmentation warhead that maintains the capability provided by the AGM-114M while adding a unique capability against confined compartmented spaces, a typical target type observed in current combat operations. Other variants include the K2A, which has a blast frag sleeve for use against soft-skinned tactical vehicles, the N5, which provides a trajectory shaping capability to increase endgame lethality against vertical structures, and the P/P+ variants, which include high altitude launch trajectories for use from fixed-wing aircraft. Additionally, the Q and Q6 variants have inert warheads, which are used for training on ranges that do not allow live warheads, and to preserve tactical missiles for use in combat. Conversions from one variant to another are done on an as needed basis.

Prior year funding includes Hellfire, Viper Strike, and Griffin.

Justification:

OCO:

From 1 October 2015 through 30 September 2016, 100 Hellfire missiles were expended to support pre-deployment training prior to Overseas Contingency Operations (OCO). FY 2019 replaces 23 of the 100 training missiles expended.

 Volume 1 - 148

⁽¹⁾ Air Training Missiles unit cost decrease in FY 2019 due to other service procurement projections and economies of scale.

⁽²⁾ Prior year costs include funding for Viper Strike and Griffin. Funding procured 140 Viper Strike and 130 Griffin missiles.

⁽³⁾ Production Engineering Support (PES) is proportional to weapon procurement quantities.

[&]quot;A" in the Delivery Schedule indicates the Contract Award Date.

Note: Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 1,000,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand). If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

Description:

The AGM-65 Maverick is a tactical, air-to-surface, guided missile designed for close-air support, interdiction and defense suppression missions. It also provides stand-off capability and high strike probability against a wide range of tactical targets, including high-speed moving targets, armor, air defenses, ships, transportation equipment and fuel storage facilities. The AGM-65E2 is a joint effort by the Navy and Air Force to modernize this capability with an enhanced laser seeker and new software that reduces the risk of collateral damage. The AGM-65E2 is a modification to the Maverick's Guidance and Control Section (GCS) to incorporate modern components which are a suitable replacement for the obsolete components of the existing AGM-65E.

Description:

ID O - I-

[AUR Installation Kits] The AGM-65 Maverick is a tactical, air-to-surface, guided missile designed for close-air support, interdiction and defense suppression missions which has been out of production for the Navy since FY 1991 in anticipation of the arrival of future missile systems. The AGM-65E2 is a conversion effort, which allows for procurement of a new Guidance and Control Section, which can be mated to an existing Maverick center aft section (motor and warhead section). This effort enables the Navy to rapidly and significantly increase the highly depleted Laser Maverick inventory using center aft sections from divested missiles to create additional AGM-65E2 All-Up Rounds. The AGM-65 is the only weapon in the current Navy inventory suitable for engagement of fast-moving, maneuvering land/surface targets from fixed-wing, tactical aircraft (F/A-18 A-D, F/A-18 E/F, AV-8B).

Description:

Stand Off Precision Guided Munition (SOPGM) weapon, Griffin Missile, is the threshold weapon for the KC-130J Intelligence, Surveillance and Reconnaissance (ISR) Weapon Mission Kit USMC requirement. This weapon satisfies a portion of the required roll-on/roll-off capability inherent in the ISR Weapon Mission Kit.

Griffin is a rocket propelled missile and uses the Global Positioning System/Inertial Navigation System (GPS/INS) to navigate to the target vicinity and a semi-active laser (SAL) seeker for terminal guidance to target impact.

The Griffin will be used on KC130J (Alpha variant) and Cyclone class Patrol Coastal (PC) ships (Bravo variant). The Griffin Alpha variant is an air launched missile and the Bravo variant is a ship launched missile.

Justification:

Griffin Missile base funding is required to support Griffin Missile System Rapid Deployment Capability (RDC) program for the Patrol Coastal (PC) ships. The RDC provides an anti-surface missile capability to improve the ship's ability to defend against enemy small boat attacks.

FY 2019 base funding procures 15 Griffin Bravo variant missiles and funds Griffin Bravo Variant Production Support, which will address critical missile service life surveillance and environmental testing to support the service life assumption of 11 years. This increased service life is the basis for out-year reduced procurement quantities and ensures the fleet is properly equipped.

FY 2019 base funding also supports the procurement of 16 Griffin Alpha variant missiles for the certification and qualification of the AGM-176A Block III on the Harvest HAWK platform.

Footnotes:

- (1) US SOCOM awarded a sole source 5 years IDIQ in FY 2017 to cover purchases in FY 2017 through end of contract period of performance. Awarded 18 August 2017. Quantities, as well as inflation, are the cost drivers. Overall, quantities procured are expected to be significantly lower than previous years, which places the unit cost potentially in the upper range. Unit costs vary due to the different configurations being procured.
- (2) Production engineering support line includes Griffin Missile engineering services efforts related to field and operations services; Anti-jam Protection Technology Receiver Global Positioning System (GPS); program management office technical support; and US SOCOM contract processing fee. Funding will be required to continue Griffin Missile Ordnance Assessment surveillance program which began in FY 2016 and will be on-going through FY 2019 to extend the Griffin Missile Service Life from 5 years to 11 years to support Fleet loadout requirements.
- (3) SM860 Integrated Logistics Support funds support a one-time requirement to certify and qualify the AGM-176A Block III on the Harvest HAWK platform. These funds will provide 16 AURs for destructive testing, fund testing costs including flight hours, range space, telemetry, and other required support costs including associated administrative and contractor fees.
- (4) SM850 Production Engineering Support funds support a one-time requirement to certify and qualify the AGM-176A Block III on the Harvest HAWK platform. These funds will provide 16 AURs for destructive testing, fund testing costs including flight hours, range space, telemetry, and other required support costs including associated administrative and contractor fees.

Footnotes

⁽⁵⁾ Beginning with FY 2016 contracts, Raytheon is no longer procuring Long Lead Items ahead of award - this changes extends delivery from 12 months to 15 months after award.

⁽⁶⁾ FY2015 missile proocurement deliveries were completed ahead of schedule. Deliveries received January and March, 2017.

⁽⁷⁾ FY2016 missile proocurement deliveries were completed ahead of schedule. Deliveries received March and June, 2017.

⁽⁸⁾ US SOCOM awarded a sole source 5 years IDIQ in August, 2017 to cover purchases in FY 2017 through contract period of performance.

⁽⁹⁾ FY 2019 Alpha Variant unit price is lower than Bravo variant unit price due to economy of scale with USAF procurements and differences in configuration.

Description:

The Aerial Targets program provides threat representative aerial targets for the test and evaluation (T&E) and fleet training events. Assets procured under this line item are used to simulate and replicate currently fielded subsonic and supersonic Anti-Ship Cruise Missile (ASCM) threats. The threat representative targets are used to test and evaluate Navy ship self-defense systems currently in development, and are required for the successful completion of independent operational test and evaluation prior to fielding the systems to the fleet. Some variants are also used as Fleet Training assets to support fleet readiness. All assets procured by the Aerial Targets program are a critical element in improving the warfighters ability to counter threats and improve threat readiness capability. This program is composed of four primary components: (1) Subsonic targets, (2) Other Targets, (3) QF-16 Full Scale Aerial Target (FSAT), and (4) Auxiliary/Augmenting Systems.

(1) Subsonic targets

The Subsonic targets program is composed of continuing subsonic production/modification programs to include the BQM-177A Subsonic Aerial Target (SSAT) and avionics upgrade kits for the BQM-34S (BQM Target Modification). The BQM-177A SSAT provides dynamic, high-subsonic, sea-skimming, ASCM threat emulation for testing of USN ship defensive weapon systems and other surface-to-air systems and will replace current BQM-74E subsonic targets with increased capabilities. The BQM-34S is a jet-powered, high subsonic speed aerial target and the modification effort allows for the continued utilization of current BQM-34S inventories which are required to quickly mitigate critical subsonic inventory shortfall(s) to support Fleet Live-Fire training until the BQM-177A SSAT is fielded. Assets may be recovered and reused depending on the objectives of the event. Other subsonic targets include the BQM-74 and various Unmanned Aerial Vehicle (UAV) platforms to replicate emerging UAV threats.

(2) Other Targets

The Other Targets program is composed of a continuing powered supersonic target production/modification program, the GQM-163A Supersonic Sea Skimming Target (SSST). The SSST is a non-recoverable supersonic sea skimming aerial target, capable of speeds in excess of Mach 2.5 and cruise altitudes from 15 to 66 ft. SSST replicates a family of supersonic sea skimming, ASCM threats to meet critical T&E requirements of USN ship self-defense systems. Additionally, SSST has successfully demonstrated a higher altitude diving threat profile capability. Funding may also be used to procure other supersonic targets in support of unique and emerging threat simulations.

(3) Full Scale Aerial Target (FSAT)

The QF-16 FSAT is an Air Force-led program providing a 4th generation, full scale, threat representative target providing a replacement for the FSAT/QF-4. The QF-16 FSAT is a converted F-16 aircraft that provides a supersonic, high altitude, remote-controlled aerial target. This target has full command and control capability through normal flight envelopes. The QF-16 FSAT target presentations supports aircraft and weapons systems testing and development, including that of the Joint Strike Fighter, AIM-9X Sidewinder missile, AIM-120 Advanced Medium Range Air-to-Air Missile, and Standard Missile-6.

Justification:

The FY 2019 funding request was reduced by \$0.579 million to reflect the Department of Navy's effort to support the Office of Management and Budget directed reforms for Efficiency and Effectiveness that include a lean, accountable, more efficient government.

Subsonic

Missiles

FY 2019 funding supports the increased procurement of the BQM-177A Subsonic Aerial Target (SSAT) Full Rate Production (FRP) 1 contract, as well as associated kits and equipment. Funds also support continued procurement/installation of avionics upgrade kits for modification to the BQM-34S targets and other subsonic target hardware.

Other Targets

FY 2019 funding is required for the procurement, production, and modification of supersonic targets. Funds will support execution of the GQM-163A Supersonic Sea Skimming Target (SSST) FRP 13 contract and other supersonic targets.

Full Scale Aerial Targets

In FY 2019, funding for the QF-16 Full Scale Aerial Target (FSAT) transitions from RDT&E,N to WP,N. FY 2019 funding is required for the procurement, production, and modification of the QF-16 FSAT. Funds will support execution of the QF-16 FSAT Lot 6 contract, associated support, and other full scale aerial targets.

Aux/Aug System Targets

FY 2019 funding is required for Auxiliary/Augmenting Systems to continue production of various target command and control systems, scoring equipment, location, identification, and navigation equipment required to safely operate all aerial targets. The targets require production of various threat simulator(s) payloads that provide affordable high fidelity simulation environments of foreign threat electronic attack and threat radar emissions. Target threat simulation requires various electronic countermeasures equipment and active emitter augmentation equipment.

OCO.

FY 2019 Overseas Contingency Operations (OCO) funding is required for the procurement, production, and modification of supersonic targets for expenditure in direct support of deployed forces readiness for combat operations in theater. These expenditures are used to ensure combat readiness of 6th Fleet deployed forces (i.e. Formidable Shield Exercise).

Footnotes:

- (1) EM031 BQM-177A The production contract in FY2017 and FY2018 were pre-priced options on the Engineering and Development contract. FY2019 will be a new Firm, Fixed Price contract.
- (2) EM441 Install/Mission Kits: BQM-177A Mission Kits are required to support fleet operations and are used to replicate various threats. Mission kit quantities vary depending on fleet test & evaluation training requirements and are not procured on a one for one basis with air vehicle quantities. The kit procurements are based on a projection of the user demand which is based on the mission profiles required for specific test objectives. Each type of kit is priced differently so the total costs of the kits is not a direct reflection on the quantity of kits being procured.
- (3) EM701 Subsonic ground equipment includes peculiar support equipment and flight presentation consumables.

[&]quot;A" in the Delivery Schedule indicates the Contract Award Date.

Note: Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 1,000,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand). If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

^(†) indicates the presence of a P-5a

⁽⁹⁾ EM203 GQM-163A (SSST): The estimated FY 2019 unit cost increased from the estimated FY 2018 cost due to the lower procurement quantity.

⁽¹⁰⁾ EM442 Install/Mission Kits: Mission kit quantities vary depending on fleet test & evaluation training requirements and are not procured on a one for one basis with air vehicle quantities. The kit procurements are based on a projection of the user demand which is based on the mission profiles required for specific test objectives. Each type of kit is priced differently so the total costs of the kits is not a direct reflection on the quantity of kits being procured.

⁽¹¹⁾ Long lead component funds are required for the procurement of D6AC steel for production of GQM-163A ducted rocket housings. The FY 2019 long lead procurement is for the FY 2020 target buy.

Footnotes:

P-1 Line #15

⁽¹²⁾ FRP9

⁽¹³⁾ The maximum production rate is currently limited to 24 units due to the availability of Government Furnished Property (GFP). The program is exploring GFP alternatives in order to increase the maximum procurement rate to 32 units per year.

⁽¹⁴⁾ FRP10

 $^{^{(15)}}$ FRP11 will include a base plus pre-negotiated options for the following two production lots (FRP12 and FRP13).

⁽¹⁶⁾ FRP12 is expected to be a pre-negotiated option that is negotiated in conjunction with the FRP11 contract.

⁽¹⁷⁾ FRP13 is expected to be a pre-negotiated option that is negotiated in conjunction with the FRP11 contract.

⁽¹⁸⁾ FRP13 is expected to be a pre-negotiated option that is negotiated in conjunction with the FRP11 contract.

^(‡) Delivery rows marked with this symbol indicate that they are funded through a separate Line Item. See the respective components' exhibits for details, including the full delivery schedule. "A" in the Delivery Schedule indicates the Contract Award Date.

Note: Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 10,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand). If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

Footnotes:

(13) The maximum production rate is currently limited to 24 units due to the availability of Government Furnished Property (GFP). The program is exploring GFP alternatives in order to increase the maximum procurement rate to 32 units per year.

^(‡) Delivery rows marked with this symbol indicate that they are funded through a separate Line Item. See the respective components' exhibits for details, including the full delivery schedule.

"A" in the Delivery Schedule indicates the Contract Award Date.

Note: Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 1,000,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand). If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

Footnotes:

(21) Production rates are based on joint procurements between the United States Air Force and the United States Navy.

Description:

The MK-41 Vertical Launching System (VLS) is a surface combatant missile launching system designed to store, select, and launch various Standard Missile configurations, Tomahawk, Tactical Tomahawk, Evolved Seasparrow (ESSM) and Vertical Launch Anti-Submarine Rocket (ASROC) (VLA) missiles. The MK-41 VLS significantly improves missile capacity, flexibility, multi-mission capability, reaction time, rate of fire, and is designed to be adaptable to present and future weapon systems. Current configurations are: two 61 cell launchers (forward and aft) for 22 TICONDEROGA (CG 47) Class Cruisers beginning with CG-52, one 61 cell aft and one 29 cell launcher forward for 28 ARLEIGH BURKE (DDG 51) Class Destroyers, one 64 cell launcher aft and one 32 cell launcher forward for 34 DDG 51 FLT IIA ships.

[P5 / CANISTER EQUIPMENT]: Funds procurement and installation of canister and gas management hardware Engineering Change Proposals (ECPs) and Ordnance Alterations (ORDALTs).

^{*}Title represents 1) the Number / Title for Items; 2) the Number / Title [DODIC] for Ammunition; and/or 3) the Number / Title (Modification Type) for Modifications.

Note: Totals in this Exhibit P-40 set may not be exact or sum exactly due to rounding.

Justification:

Funds are required for production support and Integrated Logistics Support (ILS) including: supply support, provisioning and technical documentation in support of weapon stations, All Up Round (AUR) facilities, and the fleet. Funds also provide for development and procurement of critical Engineering Change Proposals (ECP) and Ordnance Alterations (ORDALT) that improve reliability and implement safety upgrades for MK-41 VLS canisters and gas management hardware. Availability of upgraded canisters, canister hardware, and gas management hardware directly impacts fleet loadouts, operational availability, and safety.

The FY 2019 funding request was reduced by \$0.013 million to reflect the Department of Navy's effort to support the Office of Management and Budget directed reforms for Efficiency and Effectiveness that include a lean, accountable, more efficient government.

Description:

Long Range Anti-Ship Missile (LRASM) is Increment 1 of the Offensive Anti-Surface Warfare (OASuW) weapon development program. LRASM will be a key air launched component of the Navy's overall Cruise Missile Strategy. The Department will transition the Defense Advanced Research Projects Agency (DARPA) / Office of Naval Research (ONR) LRASM demonstration design into a fielded weapon system which will support an increased offensive strike capability with an Early Operational Capability (EOC) in 2018 for U.S. Air Force B-1 and 2019 on U.S. Navy F/A-18E/F. In response to U.S. Pacific Command Urgent Operation Need (UON) statement, LRASM is intended to provide the first increment of the next generation ASuW capabilities addressing the most urgent air-launched requirement, significantly reducing joint force warfighting risks, and positioning the Department to address evolving surface warfare threats.

The U.S. Air Force will be procuring LRASMs in FY 2017 through FY 2019 at the following quantities:

FY 2017 - 19

FY 2018 - 12

FY 2019 - 12

LI 2291 - LRASM

^{*}Title represents 1) the Number / Title for Items; 2) the Number / Title [DODIC] for Ammunition; and/or 3) the Number / Title (Modification Type) for Modifications.

Note: Totals in this Exhibit P-40 set may not be exact or sum exactly due to rounding.

Justification:

FY 2019 funding procures a total of 25 Long Range Anti-Ship Missiles (LRASM).

LRASM development/fielding is funded to focus on meeting the time-critical requirements, while accepting manageable levels of technical risk, and is utilizing the DoD Instruction 5000.02 Model 4 Accelerated Acquisition process to achieve speed to the fleet. The program's funding profile was developed to enable fielding at the time required by the warfighter. Due to the accelerated nature of the program's acquisition strategy, volatility in the funding profile has an intensified impact on the program's ability to meet the early operational requirements, and any reduction in funding will increase risk to fielding the required capability at the specified time.

^(‡) Delivery rows marked with this symbol indicate that they are funded through a separate Line Item. See the respective components' exhibits for details, including the full delivery schedule.

"A" in the Delivery Schedule indicates the Contract Award Date.

Note: Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 10,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand). If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

Footnotes:

(4) FY2017 Initial Procurement Lead Time represents time from award to delivery of first Air Force AUR (Sep-18) followed by delivery of first Navy AUR (Jan-19).

Description:

The Over The Horizon (OTH) missile provides the Littoral Combat Ship/Frigate (LCS/FFG) with long range anti-surface offensive capability against surface combatants. The OTH Weapon Systems (WS) consists of a Missile Launch System and a complement of missiles.

- Missile Launch System components include: a Launch Mechanism, Operator Interface, and Fire Control System which are procured with Other Procurement, Navy Funds.
- Missile components include a missile encased in a firing canister (encanistered missile). An encanistered missile consists of a flight vehicle that is mechanically and electrically connected within a weapon canister. The flight vehicle's major components are operationally joined, consisting of a warhead (explosive), propulsion system, guidance system, initiation system, and other components. The weapon canister is a mechanical structure with electrical interconnections that is used to support and restrain the flight vehicle during loading and unloading operations. The weapon canister allows the flight vehicle to mechanically and electrically connect to the Missile Launch System without being exposed to the environment.

This program is a new start.

Justification:

Over The Horizon Missile base funding is required to support Over The Horizon Weapon System program for the Littoral Combat Ships. The program provides a long range anti-surface offensive capability to improve the ship's ability to defend against enemy surface ships.

FY 2019 funds will be used to procure 8 Over The Horizon missiles encased in a firing canister.

Description:

The Evolved SEASPARROW Missile (ESSM) Program is an international cooperative effort among ten NATO SEASPARROW nations (Australia, Canada, Denmark, Germany, Greece, Netherlands, Norway, Spain, Turkey, and the U.S.) established to design, develop, test, produce and provide in-service support to a new and improved version of the SPARROW missile (RIM-7P) with the kinematic performance to defeat current and projected threats that possess low altitude, high velocity and maneuver characteristics beyond the engagement capabilities of the RIM-7P. ESSM consists of Blk 1 and Blk 2 missile upgrades.

ESSM Blk 1 provides crucial defense battlespace and fire power against the fast, low altitude, highly maneuverable Anti-Ship Cruise Missile (ASCM) threat. Modifications were made to both the MK 41 Vertical Launch System (VLS) to fire from a single cell with 4 ESSM (QuadPack) and the NATO SEASPARROW Surface Missile System (NSSMS), fielding ESSM Blk 1 onboard CVN 68, LHD 1, LHA 7, CG 47, and DDG 51 class ships. ESSM Blk 1 integration efforts continue to bring the capability to CVN 78 and DDG 1000. Testing scheduled for FY 2018 includes ESSM Blk 1 firings from the Self Defense Test Ship in support of DDG 1000 class integration, AEGIS B/L 9C2 live fire testing, and Combat Systems Ship Qualification Trials live fire tests aboard CVN 72 and LHD 2. The ESSM Blk 1 has been in production since 2004 and will complete with the delivery of MYP16-17 procurement in FY 2019. The production line will cease to exist in the 2019-2020 timeframe making ESSM Blk 1 unique sections (Guidance Sections and Transition Sections) unaffordable. PEO IWS 12 is working on a plan to procure depot level repair parts needed to sustain the ESSM Blk 1 inventory through its planned end of life (~2040).

ESSM Blk 2 upgrade replaces the largely obsolete guidance section with a dual mode Active/Semi-Active X-Band seeker capable of defeating future threat capabilities within the existing envelope, including; smaller signatures, increased raid sizes, and adverse environments including countermeasures. Threat types include: advanced ASCMs, Anti-Ship Ballistic Missiles, surface and asymmetrical. Two ESSM Blk 2 Controlled Test Vehicle flight tests were successfully conducted in JUN17 onboard the Self Defense Test Ship at the Point Mugu Sea Test Range. Three subsequent Guided Test Vehicle flight tests are scheduled in FY 2018. The ESSM Blk 2 Milestone C decision is scheduled for Q4 FY 2018 with IOC for AEGIS platforms scheduled for 2020 and SSDS platforms in 2023. ESSM Blk 2 LRIP deliveries are expected to begin in 2020 with FRP rounds delivering to the Fleet in 2023.

^{*}Title represents 1) the Number / Title for Items; 2) the Number / Title [DODIC] for Ammunition; and/or 3) the Number / Title (Modification Type) for Modifications.

Note: Totals in this Exhibit P-40 set may not be exact or sum exactly due to rounding.

Justification:

FY 2019 funding increase in MK25 Mod 1 Canisters due to an increase in the procurement quantity from 8 in FY 2018 to 12 in FY 2019.

FY 2019 funding decrease in MK30 Canisters due to a decrease in procurement quantity from 32 in FY 2018 to 16 in FY 2019.

FY 2019 funding to support increase in the procurement of all-up-rounds from quantity of 31 in FY 2018 to 45 in FY 2019

FY 2019 funding increase in production support for transition to ESSM BLK 2 procurement and an increase in missile procurement from 31 missiles in FY 2018 to 45 in FY 2019.

The FY 2019 funding request was reduced by \$0.148 million to reflect the Department of Navy's effort to support the Office of Management and Budget directed reforms for Efficiency and Effectiveness that include a lean, accountable, more efficient government.

Footnotes:

- (1) FY 2019 funding supports the increase to 12 MK-25 canisters.
- (2) FY 2018 unit cost within the ESSM portfolio changed and the program is able to procure additional containers.
- (3) FY 2018 funding increase in procurement support for transition to ESSM Block 2 procurement in FY 2018. FY 2019 funding increase in procurement support for the procurement of 14 additional ESSM Block 2 AURs.
- (4) FY 2023 Increase in Diminishing Manufacturing Services- ESSM Block 2 expects future obsolescence issues with the Transmitter in the Guidance Section. AMRAAM updated the Guidance Section electronics with its Form, Fit, Function (F3R) upgrade, but has not replaced the analog transmitter with a solid state version. ESSM Block 2 leverages this transmitter, which faces DMS and cost issues in items such as the Travelling Wave Tube. Based on AMRAAM procurement projections, ESSM Block 2 will need to begin a redesign or replacement of this item in FY 2023. This requires the development, integration, testing and qualification of a solid state transmitter in the ESSM Guidance Section to replace the analog transmitter. While the remainder of the guidance section would continue to leverage the AMRAAM F3R upgrade, this change may be ESSM Block 2 specific and not benefit from a cost sharing with the AMRAAM program.
- (5) FY 2023 Increase in Component Improvement/ECPS- ESSM Block 2 expects future obsolescence issues with the Transmitter in the Guidance Section. MRAAM updated the Guidance Section electronics with its Form, Fit, Function (F3R) upgrade, but has not replaced the analog transmitter with a solid state version. ESSM Block 2 leverages this transmitter, which faces DMS and cost issues in items such as the Travelling Wave Tube. Based on AMRAAM procurement projections, ESSM Block 2 will need to begin a redesign or replacement of this item in FY 2023. This requires the development, integration, testing and qualification of a solid state transmitter in the ESSM Guidance Section to replace the analog transmitter. While the remainder of the guidance section would continue to leverage the AMRAAM F3R upgrade, this change may be ESSM Block 2 specific and not benefit from a cost sharing with the AMRAAM program.

[&]quot;A" in the Delivery Schedule indicates the Contract Award Date.

Note: Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 10,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand). If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

Footnotes:

 $^{(6)}$ ESSM is a cooperative effort among ten NATO SEASPARROW nations which contributes to MSR.

Description:

The Harpoon Block II+ kit procurement provides the Department of Navy (DoN) with an expanded navigation and targeting accuracy over the current Harpoons within the DoN inventory. The program budget identifies the significance of the modifications and the importance of a network enabled anti-ship cruise missile as well as its complimentary capabilities with advanced launch platforms. The current DoN inventory consists of legacy systems that are insufficient against the number and type of current and future threats. The DoN's planned procurement would procure and modify legacy Harpoons with the improved kits and procurement of Captive Air Training Missiles (CATMs), to advance the DoN's anti-ship cruise missile capability and contribute to the defense of the Surface Fleet.

Harpoon Block II+ is a Net Enabled, Air-Launched, Anti-ship Cruise weapon with the ability to receive in-flight updates that improve the targeting and engagement of moving maritime targets. This system utilizes global positioning to provide in-flight updates coupled with an active radar seeker to provide accurate targeting.

The Harpoon seeker upgrade effort will modernize current seeker configurations to increase the precision of targeting. Currently, Harpoon missiles contain 3700-3. The 3700-series seekers operate by sequentially searching a pre-defined Area of Uncertainty (AOU). The seeker was designed to detect, acquire and track any surface target that happens to be in that zone. A newer seeker provides value to the warfighter through significant improvements in the sequential search radar seekers' probability of acquiring the intended target. Improvements in 3700-4+ Electronic Protection capability significantly increases the probability of engaging a valid surface target in a complex environment.

^{*}Title represents 1) the Number / Title for Items; 2) the Number / Title [DODIC] for Ammunition; and/or 3) the Number / Title (Modification Type) for Modifications.

Note: Totals in this Exhibit P-40 set may not be exact or sum exactly due to rounding.

Justification:

FY 2019 provides funding to procure 44 Harpoon Block II+ kits and 8 Captive Air Test Missiles (CATM). The Harpoon Block II+ kits support retrofitting the Harpoon 1C weapons in inventory. The CATM will provide fleet operators with loading, handling and employment training. Modifying the Harpoon 1C inventory to the Harpoon Block II+ will result in higher average reliability with increased target selectivity. Installation of kits procured in FY 2018 begins in FY 2019.

Description:

FY 2019 provides funding to procure 44 Harpoon Block II+ kits and 8 Captive Air Test Missiles (CATM). The Harpoon Block II+ kits support retrofitting the Harpoon 1C weapons in inventory. The CATM will provide fleet operators with loading, handling and employment training. Modifying the Harpoon 1C inventory to the Harpoon Block II+ will result in higher average reliability with increased target selectivity.

Installation of kits procured in FY 2018 begins in FY 2019.

Description:

AGM-88E Advanced Anti-Radiation Guided Missile (AARGM) is an ACAT-1C acquisition program to upgrade, and is used as a complement to, the Legacy AGM-88 High Speed Anti-Radiation Missile (HARM) with multi-mode guidance and enhanced targeting capability. The AARGM program will integrate multi-mode guidance (passive Anti-Radiation Homing (ARH)/active Millimeter Wave (MMW) Radar/Global Positioning system (GPS)/Inertial Navigation System) on the HARM AGM-88 missile. The AARGM weapon system capabilities include: active MMW terminal guidance, counter shutdown, expanded threat coverage, enhanced ARH receiver, Weapon Impact Assessment (WIA) transmission prior to detonation, GPS point-to-point weapon navigation, and weapon employment with impact avoidance zone/missile impact zones. AARGM AGM-88E production units possess the capability to engage targets in the Destruction of Enemy Air Defenses (DEAD) mission area and will be able to destroy non-traditional and Overseas Contingency Operation (OCO) targets. AARGM is a cooperative program between the Department of Defense of the United States of America and the Ministry of Defense of the Republic of Italy.

The Advanced Anti-Radiation Guided Missile Extended Range (AARGM ER) upgrade includes hardware and software improvements to AARGM's operational capabilities, including extended range, survivability, and effectiveness against complex, new and emerging threats.

^{*}Title represents 1) the Number / Title for Items; 2) the Number / Title [DODIC] for Ammunition; and/or 3) the Number / Title (Modification Type) for Modifications.

Note: Totals in this Exhibit P-40 set may not be exact or sum exactly due to rounding.

Justification:

FY 2019 funds the increase in AARGM modifications kits for All-Up-Rounds (AURs) from 243 units budgeted in FY 2018 to 252 units in FY 2019, container modifications from 126 in FY 2018 to 129 units in FY 2019, and the increase in telemetry section from 36 units in FY 2018 to 48 units in FY 2019.

FY 2019 funding supports the procurement of AARGM modifications kits for AURs, Captive Air Training Missiles (CATMs), container modifications, telemetry sections, support equipment, engineering and logistics support, Engineering Change Orders (ECO), contractor Other Production Support (OPS), Special Tooling/Special Test Equipment (ST/STE) and Diminishing Manufacturing Sources (DMS).

The FY 2019 funding request was reduced by \$0.144 million to reflect the Department of Navy's effort to support the Office of Management and Budget directed reforms for Efficiency and Effectiveness that include a lean, accountable, more efficient government.

Description:

AARGM is an ACAT-1C acquisition program to upgrade, and is used as a complement to, the Legacy AGM-88 HARM missile with multi-mode/multi-spectral guidance and enhanced targeting. Full-Rate Production (FRP) decision was granted on 4 September 2012. FRP Lot 6 contract funded with FY 2017 was awarded 4QFY2017 with deliveries commencing in April 2019.

Manufacturer Name: Or	bital ATK			Manufacturer Location: N	Northridge, CA		
Administrative Leadtime	e (in Months): 7			Production Leadtime (in	Months): 23		
Dates	FY 2017	FY 2018	FY 2019	FY 2020	FY 2021	FY 2022	FY 2023
Contract Dates	Aug 2017	May 2018	May 2019	May 2020	May 2021	May 2022	May 2023
Delivery Dates	Apr 2019	Apr 2020	Apr 2021	Apr 2022	Apr 2023	Apr 2024	Apr 2025

Footnotes:

- (1) Budget reflects requirements and updates based on contract actuals, adjusting quantity and unit costs. FY 2019 projected AUR unit cost decreases from FY 2018 due to estimated savings from Radio Frequency Processor investment.
- (2) Budget reflects requirements and updates based on contract actuals, adjusting quantity and unit costs. CATMs are based on the analysis of operational fleet training requirements.
- (3) FY 2019 increase in containers due to increase in AARGM modification units, procuring one container for every two AUR missiles and/or CATMs.
- (4) Telemetry Sections provide the data required to assess flight testing and provide the flight termination capability required for range safety during live firings on United States Navy ranges. Funding is required to meet Noncombat Expenditure Allocation (NCEA) requirements. FY 2019 funding increase due to additional quantities required to meet NCEA requirements.
- (5) Support equipment includes Common Munitions Bit/Reprogramming Equipment (CMBRE), unique support equipment, and radome covers.
- (6) Engineering change orders (ECO) are used for the Cost Improvement Initiatives (CII), safety, and engineering change proposals (ECPs) to add capability, reduce missile cost and improve production. Increase in FY 2019 is required to support an additional ECO effort to improve the HARM Mods production capability.
- (7) Production Engineering Support (PES) reflect field activity requirements as stated in the approved FRP decision.
- (8) Integrated Logistics Support (ILS) budget line supports costs of maintenance, supply support, support equipment management, computer resources support, training and training support, ILS program management, and Packaging, Handling, Storage and Transportation (PHS&T).
- (9) Other Production Support (OPS) includes prime contractor production support and recurring fixed costs that are required per lot. Funding profile for OPS reflect requirements and updated based on contract actuals. Increase from FY 2018 to FY 2019 above inflation to account for quantity increase.
- (10) Special Tooling/Special Test Equipment (ST/STE) for production facilitization includes rate tooling to meet production ramp each year as well as planning, building, installing, maintaining, calibrating, repairing and replacing of ST/STE and production equipment.
- (11) Diminishing Manufacturing Sources (DMS) added to comply with Congressional direction, H.R. 933. DMS funding includes life-of-type buys due to obsolescence parts and components and other obsolescence issue resolutions. Funding reflects the programs projected obsolescence issues and can vary from year to year.

Description:

The Advanced Anti-Radiation Guided Missile Extended Range (AARGM ER) upgrade includes hardware and software improvements to AARGM's operational capabilities, including extended range, survivability, and effectiveness against complex, new and emerging threats. Planned Initial Operating Capability (IOC) is 4Q FY 2023. The AARGM ER Low Rate Initial Production 1 is expected to award in 3Q FY 2021 with expected deliveries beginning in 2Q FY 2023.

Description:

SM-2 BLK IIIAZ: The DDG 1000 Standard Missile program of record plan is to procure SM-2 BLK IIIAZ modifications to support deployment of DDG 1000 Class Ships. This line item provides funds to procure SM-2 modification kits to support the DDG 1000 program. FY 2017 is the first year for SM-2 BLK IIIAZ procurement.

FY 2017 - 2018 funding supports procurement of Standard Missile modifications to provide SM-2 BLK IIIAZ missiles for DDG 1000 Standard Missile in-service inventory requirement. Funding includes modification kit installation in SM-2 BLK IIIA rounds. SM-2 BLK IIIA AEGIS missiles require hardware and software changes to be compatible with the new (non-AEGIS) DDG 1000 radar, combat system, X-band link and interrupted continuous wave illumination.

SM-2 BLK IIIC: On 3 November 2017, SM-2 BLK IIIC was designated an accelerated acquisition Maritime Accelerated Capabilities Office (MACO) program by the CNO and ASN(RDA), enabling procurement of a SM-2 medium range active capability beginning in 2020. SM-2 BLK IIIC provides enhanced Stream-Raid performance against numerous threats to include agile prism via target resolution in range and Doppler and missile/target pairing logic, over-the-horizon capability for increased depth of fire, enhanced capability against electronic attack, improved firepower due to decreased dependence on illuminators, and enhanced fuzing via guidance integrated fuzing. Effort leverages to the maximum extent existing SM-2 inventory and common technology to provide an affordable mix of complimentary weapons to meet a broad range of mission requirements. The inventory objective is 1,000 units.

Description:

This budget provides funding to close, deactivate, prepare, and convey the Government-Owned Contractor Operated (GOCO), Naval Weapons Industrial Reserve Plant (NWIRP) in Bedford, MA. This budget also provides funding which supports capital-type rehabilitation projects in the areas of environmental, safety, major repair, and energy conservation at the active Naval Industrial Reserve Ordnance Plant (NIROP), Allegany Ballistics Laboratory (ABL), and inactive NWIRP. Capital-type rehabilitation projects at the GOCO plant, NIROP ABL in Rocket Center, WV, supports weapons systems such as LRLAP, RAM, ESSM. AIM-9X. AIM-9M. FMU-139 Fuze. Hellfire. GMLRS. AMRAAM. Tomahawk GG and Trident GG.

[P5 / FU002 Capital Type Rehabilitation]: This program funds projects that eliminate environmental deficiencies to comply with local, state, and federal OSHA regulations. These regulations mandate requirements, which must be met if plant shutdowns in order to avoid criminal liability, and severe financial penalties. Projects to eliminate safety deficiencies in compliance with local, state, and federal OSHA regulations are also funded by this program. These regulations mandate requirements, which must be met if plant shut-downs in order to avoid severe financial penalties. The program also includes critical upgrades to maintain high liability areas such as fire and security systems, roofs, boilers, electrical distribution systems, bridge crane systems, and other structural repairs essential to maintain the industrial integrity of the plant. This line also supports projects that decrease energy consumption by installing new energy efficient systems and provides increased maintenance on these systems. Mandated in 1993 by Congress (Defense Appropriations Committee).

^{*}Title represents 1) the Number / Title for Items; 2) the Number / Title [DODIC] for Ammunition; and/or 3) the Number / Title (Modification Type) for Modifications.

Note: Totals in this Exhibit P-40 set may not be exact or sum exactly due to rounding.

Justification:

Funding is required to address critical infrastructure issues. The plants have an average age of 45 years and lack of proper maintenance will limit capabilities to maintain scheduled production rates and overall productivity.

Funding for FY 2019 will support Power Distribution Substation Upgrades, an Explosive Storage Magazine, and Reactive Waste Staging Facility upgrades and improvements at NIROP ABL.

Federal Acquisition Regulation Part 52.245-7 specifies that facilities use contracts require that the government fund capital type rehabilitation projects to support and maintain these facilities. Funding is separated to reflect environmental, safety, major repair, energy conservation, and facilities restoration.

The FY 2019 funding reguest was reduced by \$0.041 million to reflect the Department of Navy's effort to support the Office of Management and Budget directed reforms for Efficiency and Effectiveness that include a lean, accountable, more efficient government.

Description:

The Mobile User Objective System (MUOS) provides a worldwide, multi-service population of mobile and fixed-site terminal users with ultra-high frequency (UHF), narrowband, beyond line of sight satellite communications (SATCOM).

MUOS significantly increases performance and capacity in support of critical Combatant Command SATCOM priorities. MUOS is the replacement system for the UHF Follow-on (UFO) system, which is currently beyond its design life. MUOS consists of Space, Ground, and User Entry Segments. The Space Segment consists of 5 geosynchronous satellites, one which is an on-orbit spare, and provides both a legacy UHF payload, which is backward compatible with UFO, and a Wideband Code Division Multiple Access (WCDMA) payload, which provides 3G cellular-like capability. The Ground Segment or System consists of four world-wide radio access facilities (RAFs) and two satellite control facilities. Each RAF includes three 60 ft. antennas, and over 50 equipment racks which house a total of 5,000 major hardware components and 250 software applications across the MUOS Program. The RAF in Hawaii includes a Network Management Facility (NMF). The RAFs in Hawaii and Virginia each include a Switching Facility (SF). The User Entry Segment consists of the MUOS waveform that is ultimately integrated into MUOS-capable terminals. The MUOS legacy capability has been in operational use since 2012, and the WCDMA capability transitioned to Early Combatant Command Use in July 2016.

In addition to providing UHF SATCOM for the Department of Defense (DoD), the Navy has the overall responsibility to deliver the end-to-end (E2E) MUOS capability to the warfighter. This responsibility involves systems engineering, integration, and test management of all MUOS system of system activities, to include the integration of the MUOS waveform into MUOS-capable terminals and the subsequent terminal certification testing.

In June 2016 based on the results of the Multi-Service Operational Test and Evaluation-2 (MOT&E-2), Director, Operational Test & Evaluation (DOT&E) assessed MUOS not operationally effective or suitable. As a result the program is addressing the findings and preparing for MOT&E-2B in FY19 and Full Operational Capability (FOC) has been moved to FY20. Beginning in FY17, the program's focus has been updating all four radio access facilities and two satellite control facilities to address cybersecurity requirements, tech refresh of obsolescent hardware and software, and operational deficiencies.

Justification:

The FY19 budget is based on the scope of work required to update the MUOS Ground System in preparation for Operational Test in FY19 and Full Operational Capability in FY20. Program funding increased from FY18 to FY19 as a result of MUOS Ground System obsolescence and associated cybersecurity vulnerabilities which impact the ability to obtain accreditation, transition to operations, and reliability and availability of the MUOS system. The Ground System completed fielding in 2012, and currently 46% of the hardware (HW) and 96% of the software (SW) is obsolete. Emerging cybersecurity threats and increasing cybersecurity requirements have resulted in over 700 category I/II cybersecurity vulnerabilities, of which 12% are directly attributable to obsolescence. Resolution of the category I cybersecurity vulnerabilities is required by USSTRATCOM to fully transition the system to operations.

Ground System updates in FY19, which are critical to transitioning to operations, include hardware and software procurements and correction of HW/SW issues resulting from MOT&E findings, trouble tickets, and/or problem change requests. FY19 funds 5 Enterprise Agile Ground System releases and 3 minor releases deployed to each of the Ground sites, and includes associated engineering, integration, test and delivery efforts to address obsolescence, cybersecurity vulnerabilities, and ensure readiness levels support the warfighter narrowband SATCOM requirements.

FY19 continues procurement of the following equipment items in order to address obsolescence:

Earth Terminal Interface Signal Processor (ETISP) - The three ETISPs per RAF are beyond the end of support, have high failure rates and long down times due to difficulty in troubleshooting, and are high risk to Wideband Code Division Multiple Access (WCDMA) availability. This effort also provides technology refresh that increases capability to address electromagnetic interference issues with MUOS communications.

MUOS TRANSEC Controller (MTC) - The two MTCs per RAF are beyond end of support, have a failure rate that is expected to consume all spares by end of FY 19, and are high risk to satellite command and control operational availability.

Anti-Jam Modem (AJM) - The two AJMs per RAF are beyond end of life, approaching end of support, and have a failure rate expected to consume all spares by end of FY 19. These are high risk to satellite command and control operational availability.

Defense Switch Network Gateway (DSNG) - The DSN Gateway in each Switch Facility is beyond end of support, and does not support the Internet Protocol Defense Switch Network (DSN) interface that DISA has transitioned to. This results in DISA continuing to support legacy protocol for MUOS and four other programs. This increases risk to providing DSN MUOS voice capability via DISA Teleport and DSN services.

Information Assurance Components - Network Intrusion Devices, and Ground System back-up/restoral devices are beyond end of support. This obsolescence effort addresses cybersecurity requirements.

FY19 funds initial procurement efforts for the following equipment items in order to address obsolescence:

High Assurance Internet Protocol Encryptor (HAIPE) - The KG-175A's at each ground site are beyond end of support, and require a waiver from DISA for use. The KG 175D's at each ground site are beyond end of life, are approaching end of support and have a high failure rate. These are high risk to satellite command and control operational availability as well as MUOS communications operational availability.

Description:

The FY 2019 funding request was reduced by \$0.017 million to reflect the Department of Navy's effort to support the Office of Management and Budget directed reforms for Efficiency and Effectiveness that include a lean, accountable, more efficient government.

The Surface Ship Torpedo Defense (SSTD) provides a layered torpedo defense capability to protect surface ships. The SSTD WPN account procures surface ship Acoustic Device Countermeasures (ADCs). The ADC is a 3-inch expendable torpedo countermeasure (CM) that provides an over-the-side soft-kill defense against threat torpedoes. WPN funding provides new devices for fleet inventory requirements as identified in Naval Munitions Requirements Process (NMRP) necessary to equip identified surface ships and to replace expiring devices. The funding will also procure and install ready service and deep storage lockers to provide adequate storage on surface ships with countermeasure allowance.

TD010 - ADC HARDWARE: Procures the surface ship Acoustic Device Countermeasures (ADC). Quantity requirements determined by NMRP and shelf life of older units (reaching end of life). These requirements vary by ship type, location, and campaign.

TD020 - ADC READY STOWAGE LOCKER: Procure and install ready service and deep storage lockers to hold ADCs on surface ships.

TD830 - PRODUCTION ENGINEERING - In House: Funding provides specification preparation and validation, government prepared production acceptance procedures, production planning, Integrated Logistics Support (ILS) planning, coordination of government furnished information (GFI) and government furnished equipment (GFE), contract deliverable monitoring and prime contractor monitoring of cost/schedule performance. Also provides inservice engineering agent (ISEA) and technical direction agent (TDA) support for ADCs on surface ships.

TD900 - CONSULTING SERVICES: Funding under this cost code provides fair share of contractor support to the program office, including program, financial, acquisition, contract, administration and engineering management support.

TD905 - PRODUCTION ENGINEERING CONTRACTOR: Funding under this cost code provides for production engineering tasks performed by the hardware contractor.

Justification:

The FY 2019 funding procures the surface ship Acoustic Device Countermeasures (ADC) and ready stowage lockers. The funding increase from FY 2018 to FY 2019 procures additional ready stowage lockers to meet the Fleet procurement and installation plans for multiple ship classes.

^(†) indicates the presence of a P-5a

Footnotes:

⁽¹⁾ The quantity in FY 2021 reduced by half to budget \$2.2 million for Non-Recurring Engineering (NRE) on new production contract, planned to be awarded in FY 2021. NRE and First Article Testing (FAT) are necessary due to competitive award.

⁽²⁾ No NRE anticipated in FY 2019.

⁽³⁾ Ready stowage locker procurement ramps up to 14 in FY 2019 to meet the Fleet procurement and installation plan (multiple ship classes). FY 2021 quantities drop to 7 due to amount of NRE required on the new ADC contract.

Description:

The MK 48 Mod 7 Heavyweight Torpedo is the U.S. Navy's submarine launched Anti-Submarine Warfare (ASW) and primary Anti-Surface Warfare (ASuW) weapon. Procurements will increase warshot inventory available prior to Major Combat Operations. Heavyweight Torpedo provides the submarine force with an effective weapon against threat submarines and surface combatants to assist in achieving Sea Control and neutralizing or destroying threats to high value vessels. Torpedoes are the only proven weapon system that provides Navy control from sea bed to sea surface.

[P5 / G5001 - MK48 MOD 7 Hardware]: Funding under this cost code supports the award and execution of two competitive contracts for procurement of the MK48 Mod 7 Torpedo Guidance and Control and Afterbody Tail Cone Sections, production test equipment upgrades, engineering change proposals, and non-recurring engineering to resolve production issues including obsolescence. Nonrecurring Engineering (NRE) funds base contract year technology refresh due to obsolescence issues. NRE funds production of Proof of Manufacturing (POM) units, first article testing, tooling, test equipment, procurement of technical data package updates, and start-up costs for production contractors. Engineering Services and Engineering Change Proposals (ECPs) pay for studies, plans, design changes, and implementation of design changes by the contractor(s), primarily due to obsolescence that occurs during the contract performance. Also included in this cost code, is the cost of government installation and integration of MK 48 Mod 7 Guidance and Control and Afterbody Tail Cone Torpedo Sections procured in prior years with War Reserve MK 48 Mod 4 MK 107 Warhead components and Fuel Tanks assembled into an all up round(AUR). Installation costs match procurement delivery timelines. Quality assurance check-out is completed with the test and integration of operational software prior to issue of the MK 48 Mod 7 Torpedo as Warshot or Exercise Torpedo. Diminishing Manufacturing Sources (DMS) cost funds are provided to address obsolescence issues in the Guidance and Control (G&C) and After Body/Tail Cone sections during the production cycle. The contractors will be required to procure and deliver DMS material for these obsolete components.

[P5 / G5004 - Torpedo Other Procurement Investment]: Funding under this cost provides for additional Warhead electronics (new WES, Exploder, and Arming Device) and Fuel Tanks in FY 2021 to FY 2023 utilizing a new competitive MK48 Mod 7 G&C contract in order to replace the Warshot Fuel Tanks and Warhead Sections which were used by the MK48 Mod 7 Torpedo Program from FY 2016 to FY 2020 to assemble an All-Up-Round Torpedo.

[P5 / G5003 - Support and Ancillary Equipment]: Funding under this cost code provides procurement and maintenance of support, technology refresh of test equipment at Naval Undersea Warfare Centers (NUWC) Keyport (KPT) and Newport (NPT), and the contractor facility for assembly, testing and integration.

[P5 / G5830 - Production Engineering]: Funding under this cost code provides for production tasks performed by NUWC NPT and KPT and includes review of contractor generated Engineering Change Proposals (ECPs), review and resolution of contractor failures and proposed corrective action, configuration management activities, contractor monitoring, risk analysis, technical problem resolution, software engineering, safety, integrated logistics support, environmental engineering, information systems, test equipment, software maintenance and updates, and refurbishment of notable test equipment to provide to the contractors.

Justification:

G5001 MK48 MOD 7 Hardware:

LI 3117 - MK-48 Torpedo

Navy

- Procurement quantity increases in FY 2019 to support the Navy's requirement for additional warshot torpedoes available for Pre-Combat loadout (Pre-CLO).
- Engineering Services increases in FY 2019 are for the obsolescence redesign/technology refresh of the warhead electronics sensor (WES) design. The WES was designed in the 1980's and the current hardware and software design is not supportable or procurable requiring redesign, integration and test. The funding in FY 2019 procures WES proof of manufacturing units to allow for the extensive safety testing required for a change to the WES. Without redesign of the WES the Program will not have the WES section that is required in support of the FY 2021 procurements and the Navy will not be able to assemble All Up Round warshots. The inability to acquire redesigned WES will reduce procurements and available war reserve inventory in a conflict.

G5860 Acceptance T&E: Funding increase supports FY 2019 for Proof of Manufacturing (POM) unit acceptance and testing in support of production delivery of MK48 Afterbody Tailcone Sections.

Increase from FY 2018 to FY 2019 for support and ancillary equipment cost, production engineering cost and quality assurance cost in support of the increased production rate.

ID Code (A=Service Ready, B=Not Service Ready):

Footnotes:

- (1) G5001: FY 2019 funding increase for the procurement of 45 G&C Sections.
- (2) G5001: FY 2019 funding increase for the procurement of 45 After Body/Tail Cones. Unit cost is the actual contractual unit prices at that QTY for the option year awarded.
- (3) G5001: Engineering Services increases in FY 2019 are for the obsolescence redesign/technology refresh of the warhead electronics sensor (WES) design. The WES was designed in the 1980's and the current hardware and software design is not supportable or procurable requiring redesign, integration and test. The funding in FY 2019 procures WES proof of manufacturing units to allow for the extensive safety testing required for a change to the WES. Without redesign of the WES the Program will not have the WES section that is required in support of the FY 2021 procurements and the Navy will not be able to assemble All Up Round warshots. The inability to acquire redesigned WES will also reduce the ability of the Navy to have a war reserve eliminating the ability to convert exercise weapons to warshots during conflicts.
- (4) G5860: Funding is required in FY 2019 for Proof of Manufacturing (POM) unit acceptance and testing in support of production delivery of MK48 Afterbody Tail Cone Sections.

[&]quot;A" in the Delivery Schedule indicates the Contract Award Date.

Note: Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 10,000 and 999,999 all quantities are shown in thousands. If the maximum quantity is between 1,000,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand). If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

Description:

LI 3141 - ASW Targets

Navy

The MK-39 MOD 3 Expendable Mobile ASW Training Target (EMATT) is a small self-propelled underwater vehicle launched from fixed wing and rotary wing Anti-Submarine Warfare (ASW) aircraft and ASW surface ships for the purpose of providing basic open ocean sonar training and torpedo placement exercises. Its operation consists of a dynamic run trajectory that is actively controlled in depth and course with pre-programmable run maneuvers emulating threat submarines and is detectable by all current U.S. ASW Platforms.

The MK-30 is an ASW training target for Navy surface ships, submarines, and aircrafts that are capable of simulating submarine threats anticipated in the twenty-first century littoral warfare environment.

The MK-30 Service Life Extension Program (SLEP) extends the useful service life of MK-30 ASW Targets to meet annual fleet training requirements.

[P5 / TG002 - MK39 MOD 3 EMATT]: Funding under this cost code provides for the procurement of MK-39 MOD 3 EMATT vehicles and Non-Recurring Engineering (NRE). NRE funds the cost of Pre-Proof of Manufacturing (POM) units and POM units, first article testing, tooling and test equipment, procurement of technical data package updates, start-up costs, and other one-time costs for production contractors.

[P5 / TG007 - MK30 SLEP]: MK 30 MOD 1 Service Life Extension Program (SLEP) extends the MK 30 MOD 1 ASW Target Service Life to continue the use of MK 30 ASW Target until FY27. The SLEP efforts required include the replacement of critical navigation subsystems, power distribution subsystems, mechanical parts including replacement hull sections, and test equipment that are no longer procurable and/or can no longer be maintained or that needs updates for cyber vulnerabilities.

[P5 / TG832 - MK39 MOD 2/3 EMATT PROD ENG (IN-HOUSE)]: Funding under this cost code provides for production engineering tasks performed by NUWC NPT and KPT including EMATT program management support, systems engineering, and production engineering.

[P5 / TG842 - MK39 MOD 2/3 EMATT QUALITY ASSURANCE]: Funding under this cost code provides for quality assurance efforts in support of the EMATT program.

[P5 / TG862 - MK39MOD 2/3 EMATT ACCEPTANCE T&E]: Funding under this cost code provides for production acceptance of contractor hardware for the EMATT program.

[P5 / TG900 - MK39 MOD 2/3 EMATT CONSULTING SERVICES]: Funding under this cost code provides for contractor support services at the program office.

^{*}Title represents 1) the Number / Title for Items; 2) the Number / Title [DODIC] for Ammunition; and/or 3) the Number / Title (Modification Type) for Modifications.

Note: Totals in this Exhibit P-40 set may not be exact or sum exactly due to rounding.

Justification:

FY 2019 funding procures 983 EMATT targets to recover from very low inventory levels to meet Non-Combat Expenditure Allocations (NCEA) and to meet future fleet ASW training requirements. The unit price reflects the actual contract unit price for EMATT through FY 2021. The unit price is stepladder and minor funding changes may result in large quantity changes.

The FY 2019 funding request was reduced by \$0.109 million to reflect the Department of Navy's effort to support the Office of Management and Budget directed reforms for Efficiency and Effectiveness that include a lean, accountable, more efficient government.

[&]quot;A" in the Delivery Schedule indicates the Contract Award Date.

Note: Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 1,000,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand). If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

Description:

This line item procures MK-54 Mod 0 Torpedo Kits, MK-54 Mod 1 Torpedo Kits, MK-54/Vertical Launch Anti-submarine Rocket (VLA) Conversion Kits, Torpedo Exercise Sections, VLA Components and Advanced Lightweight Torpedo (ALWT) hardware. It also funds the High Altitude ASW Weapon Capability (HAAWC). The MK-54 Mod 0 LWT maximizes the use of Non-Developmental Item (NDI) technologies, incorporating the proven technologies from existing torpedo programs with state of the art Commercial-Off-The-Shelf (COTS) processors and is a modular upgrade to LWT Inventory. MK-54 Mod 1 builds on the MK-54 Mod 0 improvements to expand the torpedoes capability in shallow water littoral environment and also improves the torpedoes counter-countermeasure capability to allow higher effectiveness in current and future threat environments. The MK-54 is an anti-submarine torpedo deployed from surface ships and ASW air platforms in littoral scenarios operating in shallow water acoustic and environmental conditions; effective in the presence of threat countermeasures and capable in deep water engagements. The ALWT builds on the MK 54 LWT and the MK 50 LWT, to provide improved torpedo effectiveness, through warhead, sensing, processing, propulsion and software upgrades.

The procurements for both the MK-54 MOD 0 Kits and MK-54 MOD 1 Low Rate Initial Production (LRIP) kits overlap in FY 2016-FY 2020. HAAWC LRIP WPN begins in FY 2019. ALWT LRIP WPN begins in FY 2022

[P5 / F5104 MK-54 MOD 0]: Funding under this cost code provides for the procurement of MK-54 MOD 0 hardware kits from the contractors (2), Engineering Change Proposals (ECPs) and Non-Recurring Engineering (NRE) to produce pre-Proof of Manufacturing (POM) units and POM units in the base year of a new contract, first article testing, product improvement, tooling and test equipment, procurement of technical data package updates and start-up costs for production contractors. The MK-54 MOD 0 Kits contract, includes Processor Group Assembly (PGA), Control Group Assembly (CGA), Inertial Measurements Unit (IMU), and afterbody components and cabling. The MK-54 MOD 0 Array Nose Assembly (ANA) kits contract, consists of array receivers and transmitters. Both contracts were competitively awarded. These items are assembled/installed with an MK-46 torpedo warhead and an upgraded MK-46 afterbody. Also included is government installation of the kits into All Up Rounds (AUR). Diminishing Manufacturing Sources (DMS) costs fund the procurement of obsolete commercial material to avoid the redesign and regualification of the electronics during the production cycle.

[P5 / F5110 MK-54 MOD 1 HARDWARE]: Funding under this cost code provides for procurement of MK-54 MOD 1 hardware kits from the contractors (2), Engineering Change Proposals (ECPs) and Non-Recurring Engineering (NRE) to produce Proof of Manufacturing (POM) units, first article testing, product improvement, tooling and test equipment, procurement of technical data package updates, and startup costs for production contractors. The MK-54 Mod 0 Kits contract provides the afterbody upgrade components, Inertial Measurements Unit (IMU) and Control Group Assembly (CGA) for the MK54 MOD1 Kit. The MK54 MOD 1 Array contract provides the new 112 element array, receiver, transmitter, and Processor Group Assembly (PGA). Also included is government installation of the kits into All Up Rounds(AUR). Diminishing Manufacturing Sources (DMS) costs fund the procurement of obsolete commercial material to avoid redesign and regualification of the electronics during the production cycle.

UNCLASSIFIED

Exhibit P-40, Budget Line Item Justification: PB 2019 Navy		Date: February 2018
Appropriation / Budget Activity / Budget Sub Activity: 1507N: Weapons Procurement, Navy / BA 03: Torpedoes and Related Equipment / BSA 2: Mod of Torpedoes and Related Equip	P-1 Line Item Number / Title: 3215 / MK-54 Torpedo Mods	

ID Code (A=Service Ready, B=Not Service Ready): A Line Item MDAP/MAIS Code: N/A

Program Elements for Code B Items: N/A Other Related Program Elements: N/A

[P5 / F5105 FLEET EXERCISE SYSTEMS]: Funding under this cost code provides for procurement of MK-54 Fleet Exercise Sections (FES) utilized during in-water acceptance testing of MK-54 kits, fleet exercises and developmental and operational testing.

[P5 / F5107 MK-54/ VLA KITS]: Funding under this cost code provides for procurement of MK-54 VLA upgrade kits, associated hardware, installation costs, and the associated engineering tasks, which supports the conversion and upgrade of existing MK-46 VLA's to make them compatible with the new MK-54 Mod 0 Torpedo. The MK-54 VLA upgrade kit is comprised of an upgraded Digital Auto-Pilot Control (DAC) unit, upgraded air stabilizer, upgraded Thrust Vector Controller (TVC), new MK-54 Torpedo Downloader System (TDS) payload cable, and new nose cap. The MK-54/VLA kit procures and installs modified VLA items for MK-54 compatibility. A MK-54/VLA kit consists of modifications to the digital autopilot and air stabilizer and new nose caps and cables. Funding in this cost code also pays for the upgrade of existing VLA canisters to be compatible with the MK-54 VLA torpedo downloader capability.

[P5 / F5109 HAAWC]: Funding under this cost code provides for procurement, Engineering Change Proposals (ECPs) and non-recurring engineering of the MK-54 High Altitude ASW Weapon Capability (HAAWC) for the P-8 aircraft. HAAWC is an Air-Launched Accessory (ALA) that allows for employment of the MK-54 outside the current fixed wing air launch envelope. The nonrecurring cost sub-cost element is required for redesign due to obsolescence and qualification of new products or contractors and proof of manufacturing units for first article testing, as well as product improvement, value engineering, tooling, test equipment, procurement of technical data package updates, start-up costs, and other one-time costs in the first year of the production contract.

IP5 / F5003 SUPPORT EQUIPMENT]: Funding under this cost code provides for procurement and maintenance of support and test equipment at Naval Undersea Warfare Centers (NUWC) Keyport and Newport, and the contractor facility for assembly, testing, and integration.

[P5 / F5830 PRODUCTION ENGINEERING IN-HOUSE]: Funding under this cost code provides for production engineering tasks performed by NUWC Newport and Keyport and includes review of contractor generated ECPs, review and resolution of contractor failures and proposed corrective action, configuration management activities, contractor monitoring, risk analysis, technical problem resolution, software engineering, safety, integrated logistics support, environmental engineering, and information systems. Funding maintains production specification in accordance with production processes and provides subject matter experts to support root cause analysis of failed contractor hardware and monitor contractor defect resolution and reduction processes to ensure deficiencies are effectively addressed.

[P5 / F5840 QUALITY ASSURANCE]: Funding under this cost code provides for quality assurance tasks performed by Naval Undersea Warfare Center (NUWC) Newport and Keyport including: conducting quality assurance reviews of the contractor and subcontractors, documentation indicating contractor conformity to product performance requirements, and review of objective quality evidence.

[P5 / F5860 ACCEPT TEST & EVALUATION]: Funding under this cost code provides for government production acceptance test planning and conducting the production acceptance test program of contractor hardware, including in-water testing of the torpedoes on department ranges.

IP5 / F5900 PRODUCTION ENGINEERING CONTRACTORI: Funding under this cost code provides for contractor support to the program office.

[P5 / F5103 FIELD SUPPORT OPERATIONS]: Funding previously allocated for field support tasks to upgrade MK-46 Torpedo VLA to MK-54 Mod 0 Torpedo VLA.

Note: Totals in this Exhibit P-40 set may not be exact or sum exactly due to rounding.

Justification:

FY 2019 program funding changes:

COST CODE F5104 ITEM 1.1.1 MK54 KITS MOD 0 HARDWARE: Reduction in MOD 0 kit quantity from 114 in FY 2018 to 66 in FY 2019 to fund MOD 1 Processing Group Assembly (PGA) redesign required for MOD 1 production efforts under Cost code 5110 (Item 2.2.1).

COST CODE F5104 ITEM 1.1.3 MK 54 MOD 0 Kit Installation: The program will install procured kits delivered per the P-21 exhibit. Installation occurs one month after delivery and the installation is budgeted for in the year the installation is planned to occur. In FY 2019, 78 kits are planned for installation.

COST CODE F5110 ITEM 2.1.2 MK 54 MOD 1 DIMINISHING MANUFACTURING SOURCES: Funds are required to address obsolescence issues in the Control Group Assembly (CGA), Inertial Measurements Unit (IMU), Afterbody components and MK54 Mod 1 Array receivers and transmitter, PGA, and cabling during the production cycle. The contractors will be required to procure and deliver DMS material for these obsolete components. Increase in FY 2019 is due to substantial obsolescence issues with the PGA.

COST CODE F5110 ITEM 2.1.4 MK 54 MOD 1 INSTALLATION: Funding provides for government installation of the MK54 Mod 1 kits and Afterbodies into All Up Rounds(AUR) as shown on the P-21. Installation occurs one month after delivery and the installation is budgeted for in the year the installation is planned to occur. In FY 2019, 50 kits are planned for installation.

COST CODE 5110 ITEM 2.2.1 NRE increased in FY 2019 to redesign the torpedo electronics to address obsolescence because electronic parts from the original FY 2006 MK54 MOD 1 design will no longer be available. If the redesign is not started in FY 2019, production orders for the MK54 MOD 1 torpedo will cease in FY 2022 due to lack of parts to make the torpedo until a new design for the electronics is available and qualified. The funding in FY 2019 will be used for the design work through Critical Design Review.

COST CODE F5109 ITEM 7.1.1 HAAWC: Funding under this cost code provides for the option exercise of a Low-Rate Initial Production (LRIP) for the procurement of MK54 High Altitude ASW Weapon Capability. Increase from 30 units in FY 2018 to 87 units in FY 2019 is to meet squadron loadouts.

COST CODE F5109 ITEM 7.1.2 TM Kits: Telemetry (TM) kits are required for HAAWCs used for squadron training. FY 2019 funding supports the procurement of 36 TM Kits.

COST CODE F5109 ITEM 7.1.7 HAAWC IN-HOUSE PRODUCTION ENGINEERING SUPPORT: Funding increase required for production engineering tasks performed by field activities to review contractor generated ECPs, review and resolution of contractor failures and proposed corrective action, configuration management activities, contractor monitoring, risk analysis, technical problem resolution, software engineering, safety, integrated logistics support, environmental engineering, and information systems. Funding maintains production specification in accordance with production processes and provides subject matter experts to support root cause analysis of failed contractor hardware and monitor contractor defect resolution and reduction processes to ensure deficiencies are effectively addressed.

COST CODE F5109 ITEM 7.2.1 HAAWC NRE: Funding required for redesign due to obsolescence and qualification of new products or contractors and proof of manufacturing units for first article testing, as well as product improvement, value engineering, tooling, test equipment, procurement of technical data package updates, start-up costs, and other one-time costs in the first year of the production contract.

Footnotes:

- (1) ITEM 1.1.1 COST CODE F5104 MK54 KITS MOD 0 HARDWARE: Reduction in MOD 0 kit quantity to fund MOD 1 PGA redesign required for MOD 1 production efforts under Cost code 5110.
- (2) ITEM 1.1.3 COST CODE F5104 MK 54 MOD 0 Kit Installation: The program will install procured kits delivered per the P-21 exhibit. Installation occurs one month after delivery and the installation is budgeted for in the year the installation is planned to occur. In FY 2019, 78 Kits are planned for installation.
- (3) Unit costs were updated in FY 2019 to the estimated award values of the new sole source contract based on the proposal received from contractor.
- (4) ITEM 2.1.2 COST CODE F5110 MK 54 MOD 1 DIMINISHING MANUFACTURING SOURCES: Funds are provided to address obsolescence issues in the Control Group Assembly (CGA), Inertial Measurements Unit (IMU), Afterbody components and MK54 Mod 1 Array receivers and transmitter, Processing Group Assembly (PGA), and cabling during the production cycle. The contractors will be required to procure and deliver DMS material for these obsolete components. Increase in FY 2019 is because of substantial obsolescence issues with the PGA.
- (5) ITEM 2.1.4 COST CODE F5110 MK 54 MOD 1 INSTALLATION: Funding provides for government installation of the MK54 Mod 1 kits and Afterbodies into All Up Rounds(AUR) as shown on the P-21. Installation occurs one month after delivery and the installation is budgeted for in the year the installation is planned to occur. In FY 2019, 50 kits are planned for installation.

UNCLASSIFIED

Exhibit P-5, Cost Analysis: PB 2019 Navy		Date: February 2018
Appropriation / Budget Activity / Budget Sub Activity: 1507N / 03 / 2	P-1 Line Item Number / Title: 3215 / MK-54 Torpedo Mods	Item Number / Title [DODIC]: 1 / MK-54 Torpedo Mods
ID Code (A=Service Ready, B=Not Service Ready) :	MDAP/MAIS Code:	

- (6) ITEM 2.2.1 COST CODE 5110 NRE: increased in FY 2019 from FY 2018 due to the need to redesign the Torpedo electronics and meet program projection requirements for the MK54 MOD 1 for domestic use. The funding in FY 2019 will be used for the design work through Critical Design Review. Redesign is necessary because electronic parts from the original design form FY06 are no longer available to make the Torpedo. Bridge buys of available electronic parts have been executed to support the FY 2018-FY 2021 planned production orders. If the redesign is not started in FY 2019, production orders for the MK54 MOD 1 torpedo will cease in FY 2022 due to lack of parts to make the torpedo until a new design for the electronics is available and qualified.
- (7) COST CODE F5109 ITEM 7.1.1 HAAWC: Funding under this cost code provides for the option exercise of a Low-Rate Initial Production (LRIP) for the procurement of MK54 High Altitude ASW Weapon Capability. Increase from 30 in FY 2018 to 87 units in FY 2019 is to meet squadron loadouts.
- (8) COST CODE F5109 ITEM 7.1.2 TM Kits: Telemetry (TM) kits are required for HAAWCs used for squadron training.
- (9) COST CODE F5109 ITEM 7.1.7 HAAWC IN-HOUSE PRODUCTION ENGINEERING SUPPORT: Funding increase required for production engineering tasks performed by field activities to review contractor generated ECPs, review and resolution of contractor failures and proposed corrective action, configuration management activities, contractor monitoring, risk analysis, technical problem resolution, software engineering, safety, integrated logistics support, environmental engineering, and information systems. Funding maintains production specification in accordance with production processes and provides subject matter experts to support root cause analysis of failed contractor hardware and monitor contractor defect resolution and reduction processes to ensure deficiencies are effectively addressed.
- (10) COST CODE F5109 ITEM 7.2.1 HAAWC NRE: Funding required for redesign due to obsolescence and qualification of new products or contractors and proof of manufacturing units for first article testing, as well as product improvement, value engineering, tooling, test equipment, procurement of technical data package updates, start-up costs, and other one-time costs in the first year of the production contract.

[&]quot;A" in the Delivery Schedule indicates the Contract Award Date.

Note: Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 1,000,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand). If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

Description:

This line item procures MK 48 Mod 7 Common Broadband Advanced Sonar System (CBASS) kits for Heavyweight Torpedo upgrades.

The CBASS torpedo kit consists of three major components: Guidance & Control Box (GCB), a Broadband Sonar Analog Receiver (BSAR), and preamplifier. The GCB continued from Mods in production since FY 2002 and procurement of the BSAR began in FY 2004. The BSAR is a CBASS specific item, which consists of a preamplifier, receiver, and interfacing hardware that provides the capability to transmit and receive over a wide frequency band: taking advantage of broadband signal processing techniques. This provides for improvements in advanced threat countermeasures (CMs) capabilities.

[P5 / D1001 Hardware]: Funding under this cost code provides for the procurement of CBASS hardware kits from the contractor, Engineering Change Proposals (ECP), and Non-Recurring Engineering (NRE) to resolve production issues, including obsolescence. Engineering Services and Engineering Change Proposals (ECPs) pay for studies, plans, design changes, and implementation of design changes by the contractor; primarily due to obsolescence that occurs during the contract performance. Also included in this cost code is the cost of government installation of kits procured in prior years. The installation includes required upgrades to convert the MK 48 Mod 6 Torpedo into a MK 48 Mod 7 Torpedo. The pre-amp, guidance control box, EMI filter, and Broadband Sonar Analog Receiver (BSAR) are installed at the government Intermediate Maintenance Activity. The torpedo goes through a final integration test, is loaded with the operational software, and completes quality assurance checkout prior to issuing it as a warshot or exercise torpedo. Diminishing Manufacturing Sources (DMS) funds are provided to procure electronic parts, which are declared obsolete by the original equipment manufacturing. This is done to avoid the cost of an expensive redesign in the CBASS kit during execution of the production contract. The contractor will be required to procure, deliver, and store the MK 48 Mod 7 DMS material for these obsolete components. Non-Recurring Engineering (NRE) funds the procurement of Proof of Manufacturing (POM) units for government testing, first article testing, tooling and test equipment, procurement of technical data package updates, and start-up costs for the production contract.

[P5 / D1002 - MK48 TI-1 Hardware]: Program under this cost code provides for the procurement of Low Rate Initial Procurement (LRIP) for TI-1 Guidance & Control Section upgrade, which will supply a new Guidance and Control (G&C) including new Sonar Assembly (higher density array, transmitter, receiver), Guidance and Control Box (GCB), Tuning Box, and an Ethernet device switch. In addition to the G&C section, the TI-1 upgrade will also feature a new Warhead Electronics System (WES) to support improved fuzing and the Improved Post Launch Communications System (IPLCS), which will potentially replace the existing copper guidance wire with fiber optics. Improvements are needed in the presence of countermeasures, shallow water, low Doppler targets, fusing, Very Shallow Water (VSW), and Anti Surface Warfare (ASuW) performance. TI-1 upgrade allows full fleet introduction of the APB-6 and to meet requirements of MK 48 Improvements CDD (857-97-12). A new competitive TI-1 G&C contract will be awarded in FY2023.

Justification:

FY 2019 Program Changes:

1.1.4 CBASS Installation: FY 2019 funding supports the increase in installations of CBASS kits. In FY 2019, 50 kits are scheduled to be delivered and installed.

The FY 2019 funding request was reduced by \$0.103 million to reflect the Department of Navy's effort to support the Office of Management and Budget directed reforms for Efficiency and Effectiveness that include a lean, accountable, more efficient government.

[&]quot;A" in the Delivery Schedule indicates the Contract Award Date.

Note: Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 1,000,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand). If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

Footnotes:

- (4) MSR and EOQ have not yet been determined by the contractor.
- $^{(5)}$ MSR and EOQ have not yet been determined by the contractor.
- ⁽⁶⁾ MSR and EOQ have not yet been determined by the contractor.
- $^{(7)}$ MSR and EOQ have not yet been determined by the contractor.

Description:

The FY 2019 funding request was reduced by \$0.031 million to reflect the Department of Navy's effort to support the Office of Management and Budget directed reforms for Efficiency and Effectiveness that include a lean, accountable, more efficient government.

The program provides Naval mines for use as anti-ship or anti-submarine subsurface weapons.

The Naval mining capability consists of the QUICKSTRIKE (QS) mine, the Submarine Launched Mobile Mine (SLMM), and the modified Clandestine Delivered Mine (CDM).

The Quickstrike is a family of shallow water, aircraft laid mines used primarily against surface and subsurface craft. The QUICKSTRIKE family of delivered mines has 3 variants based on size - the MK 62, MK 63, and MK 65. The MK 62 and MK 63 (500 lb. and 1000 lb.) QS are created by adding mine hardware to the MK 82 and MK 83 general purpose bomb (respectively) to form a mine. The MK 65 (2000 lb.) QS consists entirely of hardware designed for use as a mine. The Mod 0, 1, and 3 variants utilize various Target Detection Devices (TDD). The QS Mod 3 utilizes a newly developed TDD MK 71, a software-programmable device capable of being programmed to optimize detection of new threats. For the QUICKSTRIKE MK 62 and 63, the QS Mod 3 Kit consists of the TDD (including the service and dummy MK 71), Safe/Arming (S&A) devices (including the service MK 81, and dummy MK 84), battery (MK 176), TDD Adapter Ring MK 163, and miscellaneous hardware. For the QUICKSTRIKE MK 65, the Mod 3 Kit consists of the TDD (including the service and dummy MK 71), the existing S&A devices (including the service and dummy S&A devices), the existing batteries MK 131 or 132, TDD Adapter MK 157, and miscellaneous hardware. Additional support hardware for the QS MK 62/63/65 Mod 3 includes Test Set MK 650 and Programmer MK 11. The MK 67 SLMM is the only submarine launched variant. The CDM uses existing SLMM components to provide a mine with potential to be delivered by unmanned maritime platforms.

Note: Totals in this Exhibit P-40 set may not be exact or sum exactly due to rounding.

Justification:

FY 2019 provides funding for the baseline program supporting mining capabilities for the US Navy which are deployed by multiple aircraft vehicles or are submarine launched. Also, in FY19, procurement of the Clandestine Delivered Mine (CDM) commences. This system provides a capability as required by Joint Emergent Operational Need PC-0012 which will convert legacy mining systems for delivery by Extra Large Unmanned Undersea Vehicles (XLUUV). This capability allows access to contested environments and reduces risk by using unmanned platforms.

Description:

The Torpedo Support Equipment account procures various 4T and associated torpedo components required to ready weapons for Surface Ships, Submarines, Fixed Wing, and Rotary Wing to achieve and maintain a readiness posture sufficient to provide Anti-Submarine Warfare (ASW) and Anti-Surface Warfare (ASUW) readiness. The objective of this line is to provide the fleet with exercise weapons for conducting training maneuvers, which involve firing the torpedoes, and to maintain warshot inventories in an operational ready-for-issue (RFI) status in support of combat ready deployment by ASW forces. After a torpedo is fired during a training exercise, it is recovered and all expendable components such as batteries, cables, and igniters (as well as various accessories required for air-launched torpedoes) must be replaced. These items, as well as components such as exercise heads, fuel tanks, and exhaust valves may be used more than one time, but are worn out or lost in service are procured each fiscal year in quantities dependent upon the fleet training requirements and tempo of operations. The torpedoes requiring support are the MK-46 Mod 5A(SW); MK-48 Mods 6 (legacy and ACOT) and 7; and MK-54.

[P5 / F8001 - LWT SUPPORT EQUIPMENT]: LIGHTWEIGHT (LWT) Support Equipment procures 4T components to support: (1) Exercise torpedo builds for Fleet Proficiency Surface Command Course and Tactical Development firings; (2) Warshot torpedo maintenance to sustain the fleet with an inventory of RFI warshot torpedoes as they come due for maintenance; (3) Assembly of new production MK-54 Warshots (4) Vertical Launch Anti-Submarine Rocket (ASROC) (VLA) Warshot and Exercise missile assemblies; and (5) Various air launch frame assemblies to support Fleet loadout. LWT 4T Components include the following: seawater batteries, pressure cylinders, thermal batteries, fuel shutoff valves, gas generator assemblies, igniters, containers, lanyard start assemblies, electrical initiators, suspension bands, VLA assembly kits, and propeller baffles.

[P5 / F8002 LIGHTWEIGHT OTHER EQUIPMENT INVESTMENT]: Procures, installs, and supports Engineering Change Proposal/Ordnance Alteration (ECP/ORDALT) material required for support and test equipment and to retrofit torpedoes and 4T components to the latest RFI configuration.

[P5 / F8830 LIGHTWEIGHT PRODUCTION ENGINEERING - IN HOUSE]: Provides for production support services at Naval Undersea Warfare Center (NUWC) Divisions Keyport/Newport (KPT/NPT) including program planning, funds management, budgeting, data management, acquisition engineering, software management, Integrated Logistiscs Support (ILS) and Government-Furnished Equipment (GFE) management, training equipment and configuration management.

[P5 / F8840 - LIGHTWEIGHT QUALITY ASSURANCE]: Provides material costs associated with failure analysis and site investigations for torpedo system component failures, product quality assurance (QA), and critical unique firing tests.

[P5 / F8860 - LIGHTWEIGHT ACCEPTANCE TEST AND EVALUATION]: Provides support for acceptance testing of LWT 4T components.

Justification:

Navy

FY 2019 Program Changes:

F8001: FY 2019 increase for procurement of items to include Electric Initiator, Gas Generator Assembly, Pressure Cylinder, Separator Nut Initiator required to support deep water firings to validate torpedo performance.

F8002: FY 2019 increase to procure MK 54 Fleet Exercise Sections (FES) to support planned Surface, Air, and HAAWC Exercise firings.

F8100: FY 2019 increase for procurement of WES Expansion Box (WEB) required to implement APB-5 software capability.

The FY 2019 funding request was reduced by \$0.167 million to reflect the Department of Navy's effort to support the Office of Management and Budget directed reforms for Efficiency and Effectiveness that include a lean, accountable, more efficient government.

Remarks:

[Hardware] 4T material is consumed by the Fleet and IMAs each year, and must be replaced to maintain required inventory levels (2 year stock level). If funds are marked due to contract award delays, the next years funding is not adequate to replenish material consumed in the year prior, resulting in reduced inventory putting future torpedo builds at risk. All production deliveries, Fleet training, and Warshot maintenance builds depend on 4T material being readily available.

[&]quot;A" in the Delivery Schedule indicates the Contract Award Date.

Note: Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 1,000,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand). If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

Remarks:

[Hardware] 4T material is consumed by the Fleet and IMAs each year, and must be replaced to maintain required inventory levels (2 year stock level). If funds are marked due to contract award delays, the next years funding is not adequate to replenish material consumed in the year prior, resulting in reduced inventory putting future torpedo builds at risk. All production deliveries, Fleet training, and Warshot maintenance builds depend on 4T material being readily available.

[&]quot;A" in the Delivery Schedule indicates the Contract Award Date.

Note: Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 1,000,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand). If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

Description:

The Anti-Submarine Warfare (ASW) Range program provides test and training tracking equipment for both Contiguous United States (CONUS) and Outside Contiguous United States (OCONUS). This equipment is used for ground truth tracking of participants during Fleet training exercises and torpedo firings and directly supports reconstruction and analysis for Undersea Warfare (USW) proficiency assessment and test, evaluation & analysis. The infrastructure supported includes: Southern California Offshore Range (SCORE), Barking Sands Tactical Underwater Range/Barking Sands Underwater Range Extension (BARSTUR/BSURE), Pacific Northwest Range Complex (Dabob and Nanoose), Atlantic Undersea Test and Evaluation Center (AUTEC), Portable Offshore Training Range (POTR), Portable Undersea Training Range (PUTR) and other portable capabilities abroad in support of Forward Deployed Naval Forces (FDNF) training requirements.

[P5 / F4001 - UTRE/PINGER EXERCISE EQUIPMENT]: Underwater tracking equipment is placed in weapons and other underwater vehicles for tracking during training and Test and Evaluation (T&E) exercises, and to ensure safe operation and movement of all craft and weapons on fixed and portable ranges for the Underwater Tracking Range Equipment (UTRE)/Pinger program. Funding is used to procure equipment for T&E exercises in addition to improvement and modernization projects.

[P5 / F4006 - STATIONARY TARGET EQUIPMENT MK28]: The stationary target equipment includes the MK 28 Targets and all equipment used for conducting Service Weapons Tests (SWT) on in-service and advanced war-shot torpedoes. The SWT is the only test the Navy has to verify the explosive train of lightweight and heavyweight torpedoes. Funding is used to procure target systems and equipment for SWT in addition to improvement and modernization projects.

[P5 / F4830 - PRODUCTION ENGINEERING - UTRE]: Funds for production engineering efforts performed by a field activity or contractor during the production phase of these projects.

[P5 / F4850 - PRODUCT IMPROVEMENT - UTRE]: Product improvement for fixed and portable range and fleet equipment.

Justification:

FY 2019 funds are required for transportation costs for shipments of weapons related equipment and material to its initial destination from the contractor's plant.

The FY 2019 funding request was reduced by \$0.117 million to reflect the Department of Navy's effort to support the Office of Management and Budget directed reforms for Efficiency and Effectiveness that include a lean, accountable, more efficient government.

Description:

The FY 2019 funding request was reduced by \$0.031 million to reflect the Department of Navy's effort to support the Office of Management and Budget directed reforms for Efficiency and Effectiveness that include a lean, accountable, more efficient government.

This line item procures the initial issue of weapons, modernization, standardization and stock replenishment of a wide variety of Small Arms and weapons (caliber .50 and below) to meet Small Arms allowances and inventory objectives, including required gun mounts and associated support components.

This line also provides sufficient types and quantities of weapons to support training, afloat security forces and shore missions of approximately 1,300 ship/ashore activities Navy-wide including the Naval Mobile Construction Battalions, Naval Construction Force Support Units, Construction Battalion Maintenance Units, Mobile Security Force, Marine Corps Security Force Battalion and Master at Arms. Quantities of weapons procured with the above funding are to meet Small Arms allowances and inventory objectives.

This line item also procures a range of weapons and small arms considered service common equipment for Naval Special Warfare (NSW) such as assault and sniper rifles, handguns, machine guns, mortar firing systems, and a variety of components including gun sights, gun mounts, combat and thermal optics and other related equipment. This funding supports the inventory objectives and service-common Small Arms allowances for NSW

Justification:

Funding in FY2019 supports meeting Navy inventory objectives, including the XM17 Modular Handgun System (MHS) service pistol and the 5.56 carbine. Funding also supports Naval Special Warfare efforts supporting the NSW service common inventory allowance and includes the phased replacement of M16 rifles to the M4A1N 5.56mm carbine, the replacement of the MK14 series 7.62x51MM enhanced battle rifle (EBR) with the Compact Semi-automatic Sniper System (CSASS), and M224 60MM Mortars. Funding supports procuring 56 MK 48, 935 M4A1 5.56MM Carbine, 10,000 MHS, XM17, 41 60MM Mortars (M224) associated transportation, and production engineering for Expeditionary Warfare, Funding supports procuring 2.500 M4A1 5.56MM Carbine, 10,000 MHS, XM17, 100 M2A1, and 400 MK 87-M4 UPPER and production engineering for Surface Warfare.

The increase from FY2018 to FY2019 reflects service-common requirements supporting approved End Strength Growth in order to meet Geographic Combatant Commanders (GCC) demands to support existing counter-terrorist, counter violent extremist organization, and Building Partner Capacity missions and operations. The disaggregated nature of current operations has SEAL elements deployed across the GCCs conducting combat or combat advise operations in austere environments with little-to-no established DoD infrastructure. This materiel supports NSW core mission requirements and is essential to the readiness and battlefield effectiveness of NSW in winning the current fight against ISIS and other extremist elements.

OCO:

FY 2019 OCO funding is required to replenish and reset 60MM Mortar Systems (M224) and related components used by Naval Special Warfare (NSW) in combat operations and expended in theater in direct support of Operation Inherent Resolve (OIR).

Description:

Phalanx Close-In Weapon System (CIWS) is an autonomous combat system that searches, detects, tracks (radar and electro-optic), and engages threats with a 20mm Gatling gun capable of firing 4.500 tungsten penetrator rounds per minute. Integral to ship self-defense and the anti-air warfare "defense-in-depth" concept, CIWS provides terminal defense against anti-ship missiles and high-speed aircraft penetrating other fleet defenses. Phalanx CIWS can operate autonomously or be integrated with a ship's combat system.

The Block 1B configuration provides further defense against asymmetric threats such as small, fast surface craft, slow-flying fixed and rotary-winged aircraft, and unmanned aerial vehicles through the addition of an integrated Forward-Looking Infra-Red (FLIR) sensor. Block 1B also incorporates an Optimized Gun Barrel (OGB) for tighter ordnance dispersion. Enhanced Lethality Cartridges (ELC) can be used with the OGB for improved target penetration.

The CIWS SeaRAM is a CIWS Phalanx Block 1B with the 20mm Gatling gun removed and replaced by an eleven round guide that utilizes the Rolling Airframe Missile (RAM) Block 1A or Block 2 missiles for extended Anti-Ship Missile coverage. The resulting system is designated MK 15 Mod 31/32 CIWS SeaRAM and shares a minimum of 85% hardware and software commonality of the CIWS Phalanx system. CIWS SeaRAM is installed on LCS Independence class and 4 ROTA based DDGs.

[DT6IN/DT8IN]Installation funding includes all planning and execution requirements for ship installations. Planning efforts include Design Service Allocation (DSA) efforts associated with the planning yard ship checks. Ship Installation Drawing (SID) development, installation on-site support and Ship Selected Record (SSR) updates. Execution efforts include shipvard planning, shipvard support services, installation material procurement, and Alteration Installation Team (AIT) efforts. Installations include the Rota DDG SeaRAM installs on DDGs 51, 79, 80 and 84; the CG Modernization installation on CG 68 and the installation support for the Navy Type Navy Owned (NTNO) Coast Guard WMSLs.

[P5 / DT001 CIWS BLOCK 1B]: As part of the Block 1B Reliability, Maintainability and Availability (RM&A) Roadmap effort, this line is an upgrade/conversion to CIWS incorporating a stabilized thermal imager and an automatic acquisition video tracker that provides the additional capability to engage small, high speed, maneuvering surface craft and low, slow aircraft and helicopters. The thermal imager also improves performance against Anti-Ship Cruise Missiles by providing more accurate angle tracking information to the fire control computer. CIWS Block 1B is scheduled to be installed on the following ship classes: CGs, CVNs, DDGs, LCCs, LHAs, LHDs, LSDs, WMSLs and trainers. The installations will be completed during a limited availability by Shipalt/AIT. The budget also provides for the procurement support costs (e.g., production engineering), development and fielding of future ECPs and ORDALTs, Sensor Upgrade Material, and the SeaRAM on ROTA.

^{*}Title represents 1) the Number / Title for Items; 2) the Number / Title [DODIC] for Ammunition; and/or 3) the Number / Title (Modification Type) for Modifications.

Note: Totals in this Exhibit P-40 set may not be exact or sum exactly due to rounding

Justification:

There are 231 U.S. shipboard systems, 4 trainers and 3 Engineering Development Module (EDM)/Periodic Conformance Inspection (PCI) mounts procured in the Program of Record. This budget provides for installation of 4 Coast Guard Maritime Security Cutter Large (WMSLs) and 2 CG-71 systems procured under separate budget line items. This budget also provides for the installation of 2 LSD systems reconstituted from decommissioned assets.

This budget provides for the procurement of CIWS Reliability, Maintainability and Availability (RM&A) roadmap that will provide system improvements and allow time between Class "A" overhauls to be extended while still maintaining an acceptable operational availability (Ao). The RM&A Kit #1 improvements include the following: coolant pump with improved impeller, long-life gyros. Transmitter Mode Control Unit (TMCU) improvement, Built-in-Test Equipment (BITE) Control Circuit Card Assembly (CCA), Waveguide Air Dryer System (WADS) piston compressor, WADS water separator, Gun and Ammunition Handling System (GAHS) chuting, gun cradle cable assembly, main cable reliability improvements, and resolver improvements. The RM&A Kit #2 improvements primarily include Higher Reliability Phalanx Thermal Imager (HRPTI). These RM&A improvements will be installed during overhauls or by standalone shipboard Alteration Installation Teams (AIT).

FY 2019 - FY 2022 increase for CRDC (CIWS RAM Defense Capability) to improve sensor capability. The CRDC is fielded aboard CVN class ships. This line provides for Hardware procurement, installation hardware and labor for AIT, ISEA, contractor support and initial ILS support.

FY 2019 increase funding to support additional installations on board DDGs.

The FY 2019 funding request was reduced by \$0.096 million to reflect the Department of Navy's effort to support the Office of Management and Budget directed reforms for Efficiency and Effectiveness that include a lean, accountable, more efficient government.

Description:

The CIWS Block 1B Baseline 2 Radar Upgrade (RUG) Kit is required for CGs, CVNs, DDGs, LCCs, LHAs, LHDs, LPDs, LSDs and WMSLs platforms. The CIWS Block IB Baseline 2 RUG kit is new state of the art digital radar that provides improved performance and increased reliability. It mitigates 200 obsolete components inherent in the existing analog radar by introducing advanced COTS-based signal processing coupled with new low noise signal source. It provides a 2x sensitivity increase along with expanded Doppler (velocity) coverage required for detection and tracking of advanced ASCM and asymmetric threats, provides a 10% increase in system level reliability and provides a 15% reduction in sailor man-hours required for CIWS planned system maintenance.

FY 2016 was the last year of procurement for Radar Upgrade (RUG) Kits.

Description:

The Block 1B surface mount includes the addition of a thermal imager, an automatic acquisition video tracker, and stabilization system for the tracker. The upgrade is essential to provide the Fleet capability against small high speed surface threats and low speed air threats.

[CIWS Block 1B] Installation schedule reflects the installation and the CIWS Block 1B and the modification kits CIWS Block 1B conversion upgrade. These 2 cost elements are incorporated into the mount at the factory and the complete mount is installed. The installation schedule includes 239 shipboard systems in the Program of Record (POR) and an additional 4 WMSL, 2 CG47 TICONDEROGA class and 4 SeaRAM systems for Rota-based DDGs procured under separate budget line items. This budget also provides for the installation of 2 LSD systems reconstituted from decommissioned assets. The budget also provides for the Design Service Allocation (DSA) efforts associated with the planning year ship checks, Ship Installation Drawing (SID) development, installation on-site support and Ship Selected Record (SSR) updates.

FY 2019 increase funding to support additional installations on board DDGs.

[Cruiser Mod Plan] USS ANZIO (CG 68) is the remaining non-Block 1B configured ship. CG 68 was originally in our WPN Program of Record for upgrade to Block 1B, but was placed on the decommissioning list, and therefore removed from the WPN POR budget. The Cruiser Modernization program subsequently removed CG 68 from the decommissioning list.

Description:

The Coast Guard Weapons line funds the Coast Guard combat system suite for the United States Coast Guard (USCG) cutters under the Coast Guard surface asset acquisition program. Under inter-service agreement (delineated in OPNAVINST 4000.79B), DON plans, programs, and budgets for specific Navy military equipment, systems and logistic support requirements for USCG units to ensure the USCG is prepared to execute naval warfare tasks in consonance with United States Navy (USN) units. Ship construction and installation costs are funded under the Department of Homeland Security appropriation.

The combat systems and weapons suite will be aligned with future naval ship building programs to support commonality among the two service's systems and meet national fleet objectives. The combat system suite must complement and integrate with Navy combat systems. The suite is an appropriate balance of equipment to ensure the USCG is prepared to accomplish the assigned naval warfare tasks in concert with USN units. The surface asset acquisition program combat suites include the following:

[P5 / CG002 MK 110 GUN]: Provides the MK 110 gun to engage surface threats, independently or in cooperation with other forces, achieving mission kill on high-speed coastal patrol craft beyond small and intermediate caliber gunfire effective range. Includes gun mount, equipment procurement, recurring engineering, and ILS support for the Coast Guard Maritime Security Cutter Large (WMSL) and the Offshore Patrol Cutter (OPC) in accordance with OPNAVINST 4000.79B and the Naval Operational Capabilities (NOC) document.

[P5 / CG003 MK 160 GCS]: Provides the MK 160 Mod 12 Gun Computer System (GCS) including equipment procurement, production support, systems engineering, data, and software and test support for the WMSL Class and the OPC Class. The MK 160 GCS is required to plan and direct surface threat engagements including the capability to fire warning shots, disabling fire and achieve mission kill against these threats in accordance with National Fleet Policy, OPNAVINST 4000.79B, and the NOC.

FY 2017 - 2018 MK 160 GCS Software Update will upgrade the MK 160 GCS software load for Offshore Patrol Cutters (OPC). Software will be upgraded from previous revisions to integrate the MK 20 Mod 2 Electro-Optical Sight Sensor and to receive Multi-Mode Radar video. The planned software upgrade is required to fully operate and employ the MK 160 GCS as part of the overall MK 48 Gun Weapon System on the OPC.

[P5 / CG004 MK 38 MACHINE GUN SYSTEMS]: Provides the MK 38 Mod 2/3 Machine Gun System (MGS) to plan and engage surface threats, achieving missions kill on high speed patrol craft beyond minor caliber qunfire effective range in accordance with OPNAVINST 4000.79B and the NOC. The MK 38 Mod 3 (vice Mod 2), which began production in FY 2015, permits greater effective range, greater range of elevation to engage air targets, and an improved Toplite electro-optical (EO) system. The MK 38 MGS increases shipboard self defense against small boat threats and is the main gun of the Fast Response Cutter (FRC) and the OPC Class. Includes the MK 38 gun mount, Toplite, cannon, and ancillary components, recurring engineering, outfitting spares, and integrated logistics support (ILS).

Justification:

FY 2019 increase in funding due to increase in procurement for two 57 MM Gun and associated integrated logistics support (ILS) support.

FY 2019 funding supports the procurement of Navy Type/Navy Owned (NT/NO) weapon systems, integrated logistics support (ILS), technical documentation, software, test and production support for USCG National Security Cutters (WMSLs), Fast Response Cutters (FRCs), and Offshore Patrol Cutters (OPC) being constructed under the Coast Guard Surface Asset Acquisition Program.

FY 2019 funds the following Coast Guard Weapon items for USCG cutters: procure MK 110 guns and associated ILS; procure MK 160 Gun Computer System and associated support; provide MK 160 test support; procure the MK 38 Machine Gun System, associated spares/equipment, and ILS support; provide combat system integration support; procure and integrate the ATHENA Control, Correlation & Display (CCD) System on OPCs, which provides target queuing for Gun Weapon System engagements. The MK 110 and the MK 38 are the primary weapon systems of the FRC and OPC respectively and are critical to their self-defense capabilities.

To support the construction schedule of the Department of Homeland Security addition of National Security Cutter (NSC) #9, the MK 110 gun originally funded in FY 2018 was required in FY 2017. Funds were reallocated from MK38 (CG004) to MK 110 (CG002) in FY 2017 to meet this requirement. FY 2018 MK110 funds will be allocated to procure the MK38s for USCG Fast Response Cutters for installation during a post-delivery availability in 2019.

The FY 2019 funding request was reduced by \$0.019 million to reflect the Department of Navy's effort to support the Office of Management and Budget directed reforms for Efficiency and Effectiveness that include a lean, accountable, more efficient government.

[&]quot;A" in the Delivery Schedule indicates the Contract Award Date.

Note: Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 1,000,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand). If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

Description:

Gun Mount Mods supports various types of Gun Weapon Systems, sub-system modifications and upgrade requirements.

[P5 / E5001 MK45 MODS 1&2]: Funding was realigned to E5011.

[P5 / E5002 MEDIUM CALIBER GUN MODS]: Medium Caliber Gun Mounts (MK110 57mm or MK75 76mm) are installed on LCS, USCG WMSL, and USCG WMEC cutters and land based training/test units. The gun mounts provide an anti-surface warfare and anti-air warfare capability for outfitted ships. Funds procure Ordnance Alterations (ORDALT kits), and provide Integrated Logistics Support (ILS) and production engineering for system improvements that affect safety, reliability and maintainability.

[P5 / E5004 MK45 MOD 4]: Funding was realigned to E5011.

[P5 / E5006 MINOR CALIBER GUN MODS]: Minor Caliber Gun Mounts (MK38 MOD or MK46 MOD) are installed on AS, CVN, CG, DDG, LCS, LSD, LPD, LHA, LHD, FFG, PC, USCG FRC, USCG OPC, LCC, MK VI Patrol Boats and land based training/test units. The gun mounts provide an anti-surface warfare and anti-air warfare capability for outfitted ships. Funds procure ORDALTs kits, and provide ILS support and production engineering for system improvements that affect safety, reliability and maintainability.

[P5 / E5011 MAJOR CALIBER GUN MODS]: The 5-Inch MK45 MOD Gun Mounts are automated, lightweight, single-barrel gun mounts that provide an anti-surface warfare, anti-air warfare, and naval surface fire support capability for outfitted ships. The MK45 is installed on CG47 and DDG51 Class surface ships and land based training/test units. Funds procure ORDALTs kits, and provide ILS support and production engineering for system improvements that affect safety, reliability and maintainability.

^{*}Title represents 1) the Number / Title for Items; 2) the Number / Title [DODIC] for Ammunition; and/or 3) the Number / Title (Modification Type) for Modifications.

Note: Totals in this Exhibit P-40 set may not be exact or sum exactly due to rounding

Justification:

FY 2019 E5002 MEDIUM CALIBER GUN MODS 2.1.2- \$9.1M increase is required to procure a MK 110 57mm Gun Mount as land-based test asset for In-Service Engineer Agent (ISEA) at Naval Surface Warfare Center, Indian Head, Picatinny Detachment. The ISEA needs to have a land-based our asset to effectively address Fleet issues, combat system integration, parts obsolescence, technical manual. logistic document and training course updates. As a result, the MK 110 Gun Mount Operational Availability (Ao) and Mean Time to Repair (MTTR) will be significantly improved to support the threshold requirements.

MK38 Machine Gun System kits in FY 2019 will continue procurement of MK38 MOD 3 configuration with multiple capability upgrades: 7.62mm coaxially mounted machine gun, improved Electro-Optical Infrared Sensor (EOIR) for target identification, and improved main computer unit. These capabilities will improve ship-based solutions for close range Fast Attack Craft/Fast In-shore Attack Craft (FAC/FIAC) Counter-Swarm

Installations for large deck include CVN installations. CVN installation costs are much higher than the amphibious ships previously executed (longer cable runs, larger sponsons, and floating crane requirements).

FY 2019 E5006 MINOR CALIBER GUN MODS 4.1.3 increase in Gun Kits ILS/Test/Production increase due to concurrent installations on CVN and AS class ships, which increased production, installation and test support costs.

FY 2019 E5006 MINOR CALIBER GUN MODS 4.1.7 (BASE) increase in MK38 Upgrade Kits due to increased number of MK38 Coaxial Upgrade Kits being procured in FY 2019.

FY 2019 E5006 MINOR CALIBER GUN MODS 4.1.8 increase in MK38 Upgrade Kit Install due to increased number of MK38 Coaxial Upgrade Kits being installed in FY 2019.

FY 2019 E5006 MINOR CALIBER GUN MODS 4.1.10 increase in MK38 backfit kit due to establishment for MK 38 Mod 3 ORDALT to upgrade deployed systems.

The FY 2019 funding request was reduced by \$0.809 million to reflect the Department of Navy's effort to support the Office of Management and Budget directed reforms for Efficiency and Effectiveness that include a lean, accountable, more efficient government.

Footnotes:

- (5) FY 2019 E5006 MINOR CALIBER GUN MODS 4.1.8 increase in MK38 Upgrade Kit Install due to increased number of MK38 Coaxial Upgrade Kits being installed in FY 2019.
- (6) E5006 MINOR CALIBER GUN MODS 4.1.10 was established in FY 2019 for MK 38 Mod 3 ORDALT to upgrade deployed systems.

⁽¹⁾ FY 2019 E5002 MEDIUM CALIBER GUN MODS 2.1.1 increase provides additional engineering services for increased number of in-service guns.

⁽²⁾ FY 2019 E5002 MEDIUM CALIBER GUN MODS 2.1.2 increase is required to procure a MK 110 57mm Gun Mount as land-based test asset for In-Service Engineer Agent (ISEA) at Naval Surface Warfare Center, Indian Head, Picatinny Detachment. The ISEA needs to have a land-based gun asset to effectively address Fleet issues, combat system integration, parts obsolescence, technical manual, logistic document and training course updates. As a result, the MK 110 Gun Mount Operational Availability (Ao) and Mean Time to Repair (MTTR) will be significantly improved to support the threshold requirements.

⁽³⁾ FY 2019 E5006 MINOR CALIBER GUN MODS 4.1.3 increase in Gun Kits ILS/Test/Production increase due to concurrent installations on CVN and AS class ships, which increased production, installation and test support costs.

⁽⁴⁾ FY 2019 E5006 MINOR CALIBER GUN MODS 4.1.7 (BASE)increase in MK38 Upgrade Kits due to increased number of MK38 Coaxial Upgrade Kits being procured in FY 2019. FY 2019 E5006 MINOR CALIBER GUN MODS 4.1.7 (OCO) - Funding procures the Ordnance Alteration Kits to Provide a capability improvement to MK38 Machine Gun System to Counter-Unmanned Arial System (UAS), in support of Urgent Operational Need.

Description:

Minor Caliber Gun Mounts (MK38 MOD or MK46 MOD) are installed on AS, CVN, CG, DDG, LCS, LSD, LPD, LHA, LHD, FFG, PC, USCG GPC, LCC, MK VI Patrol Boats and land based training/test units. The gun mounts provide an anti-surface warfare and anti-air warfare capability for outfitted ships. Funds procure ORDALTs kits, and provide ILS support and production engineering for system improvements that affect safety, reliability and maintainability.

Footnotes:

LI 4217 - Gun Mount Mods Navy

⁽⁷⁾ MK38 Machine Gun System kits in FY 2019 will continue procurement of MK38 MOD 3 configuration with multiple capability upgrades: 7.62mm coaxially mounted machine gun, improved Electro-Optical Infrared Sensor (EOIR) for target identification, and improved main computer unit. These capabilities will improve ship-based solutions for close range Fast Attack Craft/Fast In-shore Attack Craft (FAC/FIAC) Counter-Swarm. FY 2019 increase for 6 Surface Warfare Large Deck installations. Installations for large deck include CVN installations. CVN installation costs are much higher than the amphibious ships previously executed (longer cable runs, larger sponsons, and floating crane requirements).

Description:

The FY 2019 funding request was reduced by \$2.155 million to account for the availability of prior year execution balances.

The Surface Warfare (SUW) Mission Package (MP) increases firepower and offensive/defensive capabilities against large numbers of highly maneuverable, fast, small craft threats, giving LCS the ability to protect the sea lanes and move a force quickly through a choke point or other strategic waterway. With the SUW MP embarked, LCS has enhanced detection and engagement capability against enemy small craft and similar littoral surface threats.

The SUW MP is composed of the Gun Mission Module (GMM), Maritime Security Module (MSM), and the Surface-to-Surface Missile Module (SSMM) with Longbow Hellfire Missiles. This BLI funds procurement of full up Longbow Hellfire Missiles for the SSMM. These Longbow Hellfire missiles are procured from Army inventory and modified (modified missile software for maritime missions and add fragmentation sleeves) and certified for Navy use.

Other Related Budgets: BLIs: OPN 1603 LCS SUW Mission Modules, RDT&E 0603596N LCS Mission Modules

[P5 / Longbow Hellfire Missile]: The Hellfire Longbow missile is a fire and forget, millimeter-wave seeker missile for autonomous engagement. It has a 12.39 lb warhead, a single stage motor and a 6-8 km range when vertically launched.

[P5 / Consulting Services]: Provides program management support, engineering and technical support, studies, analysis and evaluation on mission module systems.

Justification:

FY 2019 procurement of Longbow Hellfire Missiles will support LCS SUW Division Deployments and build Navy inventory objective of 684 missiles.

The FY 2019 funding request was reduced by \$2.155 million to account for the availability of prior year balances.

Footnotes:

⁽¹⁾ Missiles to be procured from US Army stockpile. FY 2017 procurement will be for early deployment of the SSMM capability. Once the Navy takes possession of the missiles, there are shipboard modifications and certifications that need to be completed before they are delivered and become a fleet asset. This process takes 11 months.

[&]quot;A" in the Delivery Schedule indicates the Contract Award Date.

Note: Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 1,000,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand). If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

Description:

Modernized CG47 Class Ships operate independently, or as units of Carrier Strike Groups, and Surface Action Groups, in support of underway replenishment groups and Marine Amphibious Task Forces in multithreat environments that include air, surface, and subsurface threats. These ships respond to low intensity conflict/Coastal and Littoral Offshore Warfare scenarios, joint missions, as well as open ocean conflicts, providing and augmenting power projection and forward presence. In addition, these ships conduct air dominance, land attack, and force protection missions. The Cruiser Modernization warfighting improvements extend the CG47 Class Ships capabilities against projected threats well into the 21st century.

Description:

The FY 2019 funding request was reduced by \$0.070 million to reflect the Department of Navy's effort to support the Office of Management and Budget directed reforms for Efficiency and Effectiveness that include a lean, accountable, more efficient government.

Airborne Mine Countermeasures (AMCM) Equipment is currently used by MH-53E helicopters to counter the threat of sea mines. The MH-60S helicopter will be adapted for the AMCM mission in support of the development of an Organic Fleet AMCM program. The equipment is divided into three categories -- minesweeping, minehunting, and mine neutralization. (1) Minesweeping is performed by mechanical or influence sweeps. In mechanical sweeping, the mine mooring is severed by the sweep gear allowing the mine to float to the surface where it is destroyed. In influence sweeping, a magnetic or acoustic field, which simulates the magnetic/acoustic signature of a ship, is introduced into the water. This field causes the mine mechanism to actuate. (2) In mine hunting, the objective is to locate, identify, and classify mine like objects (usually by means of high resolution sonar). (3) Finally, in mine neutralization, previously identified/classified mine like objects are reacquired and neutralized using explosive devices.

[P5 / ARCHERFISH Neutralizer]: AN/ASQ-235 - Airborne Mine Neutralization System (AMNS) AMNS will provide the MH-60S helicopter with the capability to neutralize bottom and moored mines using an expendable mine neutralization device. The AMNS was tested on the MH-53E helicopter to prove the neutralization effectiveness. The system will be deployed from the MH-60S helicopter as part of the Littoral Combat Ship (LCS) Mine Countermeasure (MCM) Mission Package. This capability will be of critical importance in littoral zones, confined straits, choke points, and the Amphibious Objective Area (AOA). AMNS procurements are funded with OPN for the AMNS combat system and WPN for the AMNS Archerfish neutralizer.

[P5 - 2 / SEAFOX Neutralizer]: SEAFOX neutralizers are used from the AN/ASQ-232, Airborne Mine Neutralization System - SEAFOX (AMNS-SF), the AN/SLQ-60, Surface Mine Neutralization System -SEAFOX (SMNS-SF), and the SEAFOX Portable Mine Neutralization System (PMNS). Airborne combat systems are deployed from the MH-53E SEA DRAGON helicopters. Surface combat systems are deployed from the MCM-1 Avenger Class ships. The portable (PMNS) combat system is deployed from a Rigid Hull Inflatable Boat (RHIB).

Justification:

FY 2019 funding supports the baseline program to procure the neutralization capability for our current in service mission (SEAFOX - MH-53E helicopters and MCM Class Ships) and the neutralization capability for our organic mission (Archerfish MH-60S and LCS). This capability is currently deployed around the world to meet the current operational mine warfare mission demand for these systems. The FY2018 to F20Y19 increase supports the MCM ships with additional SEAFOX combat rounds and the extended service life of the system and to maintain the total munitions requirement inventory.

[&]quot;A" in the Delivery Schedule indicates the Contract Award Date.

Note: Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 1,000,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand). If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

Description:

This budget activity provides all WPN Spares funding, formerly separately identified in the other WPN budget activities. The procurement of spares, repair parts, and assemblies for WPN equipment requiring support by the acquisition activities, prior to the Navy Supply System Material Support Date, is outlined below for Initial and Vendor Direct spares.

Spares funding is required for the initial outfitting and repair of missiles or components that fail or are damaged while in the Fleet and for expendable items, such as guided missiles and non-recoverable target drones. For recoverable target drones, additional spares and repair parts are required to repair damage incurred while in flight, damage incurred during recovery operations, and for control and telemetry equipment.

Funding also provides for Initial and Vendor Direct spares, during the maintenance cycle, to support Anti-Submarine Warfare weapons and support equipment. Funding also provides for Initial and Vendor Direct spares in support of Navy surface ordnance, which consists of all guns, associated equipment (hoists, shields, etc.), and related material support.

Justification:

Replenishment Spares FY 2019 Program Justifications:

2101 / Tomahawk - Tomahawk spares procurements are critical to support and preserve the schedule of the TACTOM recertification start up in FY 2019. The increase from FY 2018 to FY 2019 is due to the increased spares requirements identified in the TACTOM Phase II recertification study.

2234 / Standard Missile - Increase funding in Standard Missile spares to support recertification and increase levels of Section Level spares available to support missile maintenance. Starting with the first recertification activity in FY 2017, the program will start losing fleet rounds upon section failures. These spares on hand are critical to avoiding a 12 month repair. Repairing of sections is done on the same factory line as new production. The funding also supports the addition of BLK IA sections.

2242 / Rolling Airframe Missile (RAM) - Increase supports the growing population of Block 2 missiles. The Navy plans to procure 120 RAM Block 2 in FY 2019, an increase of 60 missiles from FY 2018.

2307 / Evolved Sea Sparrow Missile (ESSM) - Increase funding in ESSM spares to support the Intermediate Level Maintenance Facility (ILMF) recertification of the missiles until 2030 which includes guidance sections, transition sections, control sections, Target Detection Device (TDD) units, and Power Supply Assembly (PSA) units before the missile can be returned to the Fleet. Transition to BLK II configuration recertification introducing new section level spares. FY 2019 funding supports increase in the procurement of all-up-rounds from guantity of 31 in FY 2018 to 45 in FY 2019

9203 / Spares for NAVAIR - The increase in replenishment spares requirement between FY 2018 and FY 2019 is based on life-cycle modeling that indicates an 18.8% increase in missile demand for AIM-9X. This demand is driven by the end of remaining AIM-9X Block I warranties, coupled with the increase of fielded Block II missiles based on existing Program of Record (POR) quantities. Additionally, the missile demand increase of 18.8% from FY 2018 to FY 2019 is due to increased flight hours and simultaneously experiencing higher than anticipated failure rates. Increase funding in Spares for NAVAIR will decrease backlogged repair pipeline as well as fielding more assets to keep pace with operational requirements. These funds will also enable platforms to avoid depot interruptions and potential startup costs.

3225 / MK-48 Torpedo ADCAP Mods - Increase in MK-48 Torpedo ADCAP Mods funding to support procurement of AB/TC components which were previously supplied as GFE.

3302 / ASW Range Support - Incorporates support for MK28 stationary target equipment.

6231 / 6T COG - Increase funding in 6T COG to support QUICKSTRIKE Mines MK 62, 63, 65, SLMM MK 67; VEMS/MCM Targets (Versatile Exercise Mines MK 74, 75, Mines Countermeasures Targets MK 44, 45, 46, 47, 48, 50, 51, 52, 53 & 57), Mines Sweeping Equipment, (AN/SLQ-48; Mission Packages I, II, III & Umbilical Cables. The mines are used by additional hulls such as LCS class and the service life extension of MCM class.

4205 / Close-In Weapons Sys (CIWS) Mods - Increase funds additional range and depth of onboard repair parts to deployers in response to fleet readiness concern/direction. Increase supports two Coast Guard Cutters added to the Block 1B install schedule, MK-15 MOD 33 SEARAM as four DDGs were added to the install schedule. Block 1B to Block 2 new readiness based sparing load out to increase CIWS reliability to cover deployers for the 5th, 6th, and 7th Fleet, and MK-14 MOD 40 sensor upgrade procurement and installation of new sensor technology on NIMITZ Class CVN Platforms.
